eft and right and muting all other tracks. Then you can import them into the project again on their old places and give them new names.

Erling

-----=_NextPart_000_0024_01C5F725.75C40B40--Thanks for sharing your info about your Linux experience, Thad. That's good to hear. My old PARIS Intel box has become my Linux/BeOS box.

I've used a lot of different hardware and OS combinations over the years. OSX with its command line, UNIX roots and tons of media production software has covered my primary computing needs fairly well for the last couple of years. However things are steadily progressing in Linux land and I think it has a bright future.

I hear you about proprietary systems. I'm not against them except when they are used to force out competition through means other than on their technical merits, as Microsoft has notably done. And on the flip side, their vulnerability in manipulated markets, as the Amiga and BeOS ably demonstrated. Open source has become the best way to survive in
