-----=_NextPart_000_00A8_01C68ED8.50BEF5D0--Jamie,

There are various sources of information, but most of this stuff is seat of the pants. It's very diversified and involves knowledge of engineering, geology, legal, construction, psychology and plain old good luck/bad luck. Some universities have programs in petroleum land management but no educational program encompasses everything. For an overview of the history of domestic oil production, I would search the internet for books about J. Paul Getty, H.L. Hunt and John D. Rockefeller.

;O)

I have the last of the 1.2 GHz dual processor G4's running Paris in OS 9.2.2.
Works fine. I have 4 EDS cards installed in a Magma 13 slot PCI expansion chassis and 2 UAD-1 cards in the computer (for some reason they stopped working in the Magma box). I frequently bounce between OS 9 and OS 10 to run Protools, Digital Performer and Bias Peak, so it's good that I have a pretty fast dual processor machine, I got mine about 2 years ago on eBay for about \$1600 in perfect condition w/ tons of software installed.

Gantt

Thanks!

GanttNo, get the model without the need for spyware detecting software, pop up blocking software, anti virus software, ad-ware detecting software. Oh Yeah, I forgot that's the way all Mac models are. No need for all that stuff on a Mac! (Virus free since 1994!)

Get the model were stupid messages don't jump in the way while your trying to get work done, with dumb messages like "it's time to stop and stretch" or "A new device has been found", when adding a USB stick/HD, instead of just mounting it and placing a short cut icon on your desk top, or an irritating

I need one as well. If you find a source please report back.
GeneHi DJ,

This guy said he could build one for me, but he wasn't sure of the specs
and couldn't guarantee it would be right.

bobp at sierratechnologies dot com

Maybe if you could send him pictures of one, he could comment on it with
more confidence.

He wrote, "Pricing would be \$61.65 for a 1.5 foot cable and it could ship
in 3-4 days ARO".

Hope this helps,

Mike

David,

Yep. The monitor (speaker) icon is lit. I see input lights on the =
MidiX-8=20

coming from my controller. I see the data coming into Cubase and it =
'prints' but=20

I can't get it to pass the note data back out to my Roland samplers at =
all.

Once the track has been recorded it will play back fine though. Maybe =
the=20

Midi patchbay's routing is screwy. I have it sending output port #1 =
(controller)

to all 8 inputs.

Tom

"EK Sound" <askme@nospam.com> wrote in message news:448edc1d@linux...
Do you have the little yellow speaker icon lit on the selected tracks?

David.

>I'm mastering a project with 12 songs. I've got about half of them nicely
done. Just for grins, I opened up the *mastering* preset on the UAD-1 plate
140. This preset doesn't really even sound like a reverb at all. It's more
like lifting the track off the ground and wrapping the audio in a silk

kimono. It just provides air and sheen to the material, yet if you apply it to a single track, it's not that great at all. It's a little retro sounding, but this material is sorta' appropriate for it. I'm going to sleep on this because my ears are getting tired. I'm almost embarrassed to use a *preset*, but I'll be damned if I can get anything sounding better by tweaking.....and then again, I would doubt that the folks at UA have a bunch of putzes creating their presets. They sure did something nice with this one.

- Neil,

Thanks man. I'll will get back to you.

Tom

"Neil" <OIUOIU@OIU.com> wrote in message news:448f8144\$1@linux...

Well.. sounds like something's "weird" (yeah that's a technical term) in some setting somewhere. It should loop through with no problem. If you can't figure it out by tomorrow, maybe I can walk you through specific settings on the phone tomorrow evening. Let me know if you want to try that - post here or e-me directly at:

neil DOT henderson AT sbcglobal DOT net

>>Clifford CoulterSmoked Sausage with Fennel

2 pkgs. Shitake mushrooms sliced
1 large red onion sliced 1/4 " thick

14 oz. diced fire roasted tomatoes
20 cloves roasted garlic or 1 heaping tbsp. roasted garlic puree
3 tbsp. olive oil

1 cup microplaned pecorino romano cheese

Season the fennel and onions with salt and pepper then saute in the olive oil until tender. Add garlic and mushrooms and cook another 5 minutes. Add tomatoes and cook another 5 minutes. Add chicken stock and bring to a fast simmer until liquid is reduced and starts to thicken (about 5-8 minutes).

Boil pasta to al dente` doneness and add to the above and mix. Remove

Plate and serve with remaining cheese per serving.

I choose Polesoft Lockspam to fight spam, and you?

<http://www.polesoft.com/refer.html>If you try to format a drive as FAT32 in WinXP it will limit you to 32GB.

However, Microsoft issued a patch that you can either install onto your system drive or onto a W98 boot floppy disk, which allows FDISK to format larger partitions as FAT32 (somebody correct me if I'm wrong).

I have used it on 200GB IDE drives within the last 12 months, but they were partitioned into 1 x 80GB and 1 x 120GB apiece, I haven't tried to partition an entire 200GB HDD as one partition yet. I'm trying it out on some 250GB SATA drives in a couple of weeks, so I hope it can be done !

I can email the patch to you if you like.

Cheers,
Stewart.

thanks for the explanation...

am i correct in thinking that i can rename
my PARIS_FX.VAR(default) to read PARIS_FX.VAR and
use that to replace my current PARIS_FX.VAR file and
find the library of missing FX? do i need to
do something particular to avoid losing my own presets?

thanks again,
jp
