Would it even be necessary to "pick from a list" or "assign" total delay? Seems like the total delay would simply be as low (or as high) as needed to compensate for the plugins used. (Unless I'm missing something, which is always a possibility...)

As for me -- I'm still on 98, 512 ram -- could I run this thing right now, just to compensate for EDS fx offsets, submix offsets, etc.?

-- interested in how this turns out -- thanks -- chas.
