e UK.

I don't really mind, as I hate the things, always problematic, but I do have many, many thousands of dollars tied up in them.

Interesting times ahead.

Martin Hno doubt about it being interesting times ahead. This will be ugly on many levels.

)

1) Sustain issues: I have no issues with sustain. In fact, the built-in compressor lets you increase the apparent sustain without fear of feedback.

Note that I'm speaking of the \_Acoustic 700\_. The one that looks like an acoustic guitar. That's the one I'm recommending for your described use.

1A) Comparing to the \_Electric 700\_: Meanwhile the \_Electric 700\_ (which I also have) DOES have some sustain issues when you select the Strat body as part of an emulation, because the Strat they modeled (a 56 or 57?) had less sustain than the Les Paul they modeled. And people noticed this and complained.

The workaround for the \_Electric 700\_ Strat is to change the body selection to one of the other electric body choices. It will still sound like a Strat because of the pickup emulation setup, but it will have longer sustain. Works great.

You'll need to have the add-on Workbench software to do this, which also works great for designing your own hybrid emulations. I set one up to sound similar to my PRS, for example, on all five pickup selector positions. Cool stuff.

I think it's hugely confusing that Line 6 gave the number "700" to two very different guitars. It's possible you were reading reviews for the wrong 700.

BTW, the \_Electric 700\_ also does a couple of acoustic sounds. Pretty well, too, but not as well as the \_Acoustic 700\_. Probably because the \_Acoustic 700\_ has heavier strings a different physical body, different programming and that handy compressor control. But I have used the \_Electric 700\_ on an acoustic gig and people told me they didn't have a problem with the acoustic sound out front.

However I prefer the \_Acoustic 700\_ for those gigs because it looks and feels more like an acoustic, I can lay into the heavier strings more, and I like the control the built-in compressor gives me. It also has a better build quality and more frets.

But the Electric makes a good backup for the Acoustic, especially for shows where I'm going to switch to the Electric for jazz/rock stuff, so both guitars come along for the ride anyway.

2) Altered tunings: Not perfect. The farther you transpose away from the original string's note, the less perfect it is. It's OK for transposing down a half or whole step, which is great for getting a song into a more comfortable key to sing. It's great for instantly getting to DADGAD or other alternate tunings for those huge sounding chords, or some open tuning slide work. It's usable for 12 string emulations where the high

string sounds are still doubled by the original string frequency.

To make it into a bass, it sounds passable an octave down on the bottom three strings (especially using the nylon emulation), but not so good an octave down on the top three strings. You can drop any string individual

n install a GK-2 pickup on any guitar if you don't have or want one with one built in.  
there is absolutely NO delay as with a midi guitar setup.  
there is also a midi out if you would like to drive a synth from the VG99.  
there are allot of models built in and infinite ways to vary those.I'm not crazy about the electric guitar models but the acoustic models kick ass.  
way too much for me to write about now.  
and it can be had for around \$1000

the martin D-28 model is my favorite so far.

Despite the fact that DP uses all 8 processors correctly, Logic is more efficient

on a 4-core than DP is on an 8-core. Apple should have an update for Logic soon that properly shows off the power of an 8-core. Digi seems to be in no hurry to show off the potential of all native power!

fallen in love with Flux plugs, but they use up a computer in a hurry.

On the subject of Reaper - you can now get their plugins  
in a bundle ported to VST...

<http://www.reaper.fm/reaplugs/>

.... and, yep - they're free.

Neill'm not sure about that - their website has been like that for 6 months or  
so. I emailed them back in October, and got a generic, vague response like  
"check back with us soon". ?? Maybe some more people need to email them and  
ask for it. ?

these are the good old days".

I wasn't thinking of that at the time, just pointing out that  
any given person's best days aren't necessarily behind them -  
whether that statement comes from a life point of view or a DAW  
point of view lol.

I guess I was trying to make a DAWble entendre. :D

Seems that even with OS X not a lot of apps are really multi-treaded enough.  
Read the section about AE

<http://www.barefeats.com/octopro4.html>

in which you have to turn on another switch to use the extra cores but it  
makes a real difference.

From what I read (and in my experience in the enterprise space where 8/16/32  
cores have been common for years, as well as 64 bit kernels and filesystems)  
the desktop apps haven't been tuned for serious multiprocessing yet. For

the time being I think it will be more of an app by app thing than a general improvement in overall performance.

Using multiple apps simultaneously should see a greater increase in performance (if you run eight apps that are one thread each and they each can have a whole CPU that can make a MASSIVE difference in both performance and 'feel' of the machine). It's not uncommon in Unix land for one core to be completely pinned and non-responsive doing some job while the apps running on the other cores feel snappy as can be.

Note also in those tests was toad's the G5s look like in comparison.

>bill, I should have been more specific.I should have said that I'm not crazy about the Les Paul models.It may be more the way the patch is written than the actual model

The patches using the standard humbuckers and P90's just don't sound right to me.again im saying the factory patches , not the potential of the VG99.

Part of it may also be the amp models they used for those patches.

This thing is endlessly tweakable.

2 separate ,simultaneous guitar models,2 separate simultaneous amp/effects chains ,filters,EQ,flexible routing ,sheesh.....

and then buss EQ/effects after that.

you want a Rick 360 and a danelectro56 through a Marshall stack and a Solano SLO100 at the same time? no problem.

you want altered tuning? the impossible is possible with this thing.

sticking a pickup at

the 12th fret ?what?

sorry for being unclear about the electric models.

The VG99 has some serious processing power(double the previous)

It fills so many needs I think everyone should get one.

A VG99 through a stereo tube amp like a mesa 20/20 would be very convenient for gigs.

anyway your going to have to get one to dig in on the capability of this thing cause a store demo wont give you the picture, unless you spend a day with the manual.

>>The earlier VG8 and VG88 were not as good as the Variax at guitar modeling when I tried them. Particularly the acoustic and strat models. I haven't auditioned the VG99 yet but I've been monitoring a discussion group which covers all of the Rolands, including the VG99:

<http://launch.groups.yahoo.com/group/vg-8/messages>

From comments on that group, all is not roses with the VG99. But it does offer some advantages:

- 1) Play a guitar you already like.
- 2) It also does amp modeling, (if you like Roland's models)

Disadvantages:

- 1) Another \$1000+
- 2) Another box to haul to gigs
- 3) For me, I'd need the additional footswitch unit
- 4) Requires adding a special pickup system

If the VG99 can do long jump alt tunings with absolutely no artifacts, that's pretty huge. I'll have to hear it to believe it.

From what I've heard, on the MIDI side the tracking is no better than the my GR-33, which isn't that great, but I'm glad they included MIDI out capability anyway (something Line 6 ought to consider).

It's always nice to have another choice.

Cheers,  
-Jamie

>>Hi Don-

Express allows same number of tracks, and has the new features that Pro has,  
like  
swipe comping. It doesn't have multi channel mix down or TDM support.  
It doesn't have Space designer (convol reverb) or Delay designer. Nor does  
it have  
the "vintage" instruments - Tonewheel, EVP88 (elec piano) or the clavinet  
included,  
although I think scaled back versions of these are available in Garageband.

>Kool, Alex. I'm currently using a Vox Tonelab into a Mesa Boogie Satellite which is a combo style 1x12 amp designed to be a stereo add on to a regular combo (it has no real preamp). I play either a custom Strat style guitar or an Ibanez Artist 335 style, depending on the gig. I'm overall pretty happy with the Tonelab and Mesa tone and feel, but I am looking for more sounds and options, and versatility like having a decent bass sound or an acoustic sound, plus better f/x would be way cool.

The thing I dig about my current rig is it feels very responsive and is very playable, if you know what i mean. Does the VG99 feel like a real amp setup, presuming you run it through a good tube power section lie a 2020? By the way, I rarely play heavy rock any more. I usually play funk, R&B, fusion or jazz.

Launch the minisite. I want to get some cool lights for my music room, things like black lights, color lights etc to set mood for a dark room. Where can I get some cool unique lights that are not spendy that would put the whooahh into my room? bill here is a link to their video demo's for the VG99

it should give you a rough idea of what this is capable of.

as far as feeling the same as a real tube amp, uh naah, but I haven't tried this through a tube amp yet so I don't know for sure.

I don't get the same feeling as playing through my lp-9 through my mesa roadking, or one of my marshalls.

the tradeoff is extreme versatility .and its not a one trick pony your

locked in to as with with one amp one guitar at the gig or session .

you have a wide range of different sounds with the VG99, an amp, and your favorite guitar. add a floor board controller if you need to control the

effects or whatever. I change patches right from my DC-1/13

the VG99 has a built in light beam controller and a ribbon controller so if

you set it on a stand right in front of you you have that option. unless

you rather dance on the floor controller...

anyway check out the videos.

I think the amp models are better than on the Vetta 2, and there are allot more slots(400)

the only thing on the vetta I like better is the roger mayer Octavia effect.

is it better than a pod? I think so

more variation than on a variax? allot more

better than VG88 or VG8? double the processors.

It's not modeling nirvana yet, but 2 steps closer than last year.

Just be careful to stay away from anything requiring a ballast or rheostats,

as they can induce an amazing amount of noise into your environment.

Hope this helps!

Mark

<alex.plasko@snet.net> wrote:

>do they still make color organs? haven't seen one of them since the sixties

OOOH Yeah! some Ratshack or Heathkit color organs.... THAT'll do  
the trick! lol

How about some track lighting with various colors to strike the  
mood? Set 3 or 4 different tracks, each with differet colored  
lights? Fuck the dimmers (since you really do need some hi-end  
dimmers to avoid getting BUZZZ in the signal chain), and just  
go with some switched color tracks?

Neilgreat sounds John,

Wondering if you want mix critiques?

Most of my thoughts are simply level tweaks

I'd bring that organ/rhodes type of keys way down..blowing away the bass

and drums that are the heart beat of the shit. ALso that stereo treatment

is too distracting from the song..And the horns and keys are too out front...

Also bring the vix up a CH..

Let the song chill a bit.. don't try so hard to make a "mix"

Just my thoughts...very close and better sounds than I ever get

Remember the lyric is where it is at..Listen to Culture or G Isaacs to get  
in vibe.

Ya mon!

>all in cubase 4.1What would it be?

Every Sunday night, I co-host a radio show called "Night Rock" on a regional radio station here in town.

This Sunday, Geoff will be calling in, so I can ask him anything I'd like.

In fact, Pamela Moore, aka Sister Mary, will be live in the studio with us -- she moved to the Chicago area several years ago and has been in with us a couple of times already. Last time, she brought homemade chocolate chip cookies.

So, do you, as a prog rock kinda guy, have anything you'd like to know?

Hell, for that matter, if any of you have a question....

I'll be happy to ask him and report back on the answers.

In two weeks, we'll have Peterik in the studio and Joe Lynn Turner on the phone.

This is a sweet gig. Doesn't pay, but it's still a sweet gig.

Ain't that the truth? I've got two of them that pretty much just sit there....

pabas a candidate myself they were easy to identify. :o)
