atever in a couple of years.

I love the features of the board. Roland really came up with several cool ideas that have been copied in many of the newer, very expensive, digital boards. Like most digital boards, some adjustments may be a couple of menu layers away, but overall the board is pretty easy to use.

With that said, there are a couple of things IMHO that make the board unacceptable for recording. For one, the audio metering has a noticeable delay, as does the overall response of the LCD display. I've learned to turn the knobs slowly and let the display catch up to avoid over shooting my intended adjustments. It's also disorienting to see the level meters move 300 to 400 ms (I'm guessing here)

sucks!

I won't buy any new, untested products. I won't consider buying one of the new intel macs for 6 months to a year. There is going to be some problems with them, you can count on it.
