It;

Its a damn clever sustem.

It even substracts latencies !!

So if you have a overall 256 samples latency and you put a plugin on =
a new

track that has 64 then the 256 overall does not change but the above =

track

gets delayed by 256-64=3D 198 !!!

He is damn clever guy !

Hope this helps,

Regards,

Dimitrios

Kerry Galloway &

for expert village though.Kerry,

On our product wiki at work, you can subscribe to the wiki via an RSS client to get the latest updates. I use sharpreader. I can't seem to be able to do that with the paris wiki. Maybe I'm just dumb. It's a great feature for a frequently updated wiki.

ChuckLOL! That's great: "I'm gonna give you an Upright Bass lesson, but I don't own one, so I'm gonna use this acoustic guitar... next I'm gonna show you how to rebuild a carburetor, but I don't have one of those either, so I'll use this microwave oven instead".

:D

> the Superbowl with 100,000 people and just project on a visible building
> for 30 seconds. WOWNope, it isn't that. I stick strictly to 44.100 on everything. That is the
first thing I changed when I installed Sonar... and everything is set to
44.100 in Paris. As I said, not a big deal on this file, but I hope I don't
run into this in future files. I make sure everything (setting and project)
is set to 44.100. I don't use 48k... although I noticed a difference in
file size, I could never really hear anything sonically different. That's
just my opinion, so I am sure others believe differently. Anyway, thanks
for all your help...

I will comment that I am having a real learning curve with Sonar 7.0. I
mean, there is nothing easy in this program. One of the things that interested
me in getting this was the built in drum program... Well, the help viseo
calls it one thing and the help files don't know what it is... and if you
scour the forums, they have different names... I was just trying to figure
out how to setup and simple drum beat for something. HA! Unlike their video
that makes it looks so easy, I have absolutely zero sound when I am placing
markers for the beats... but I have sound if I arm the midi track and hit
play. I am not even sure how to ask anyone to help me on that one... It
took me hours just figuring out how to track a simple acoustic... the record
button is almost greyed out and doesn't turn red until you hit it... how
stupid is that? It little things like that which is making me more frustrated.

It's almost like a music program written and designed by programmers, not
musicians or engineers... Well, I'll keep playing with it... I'll like to
find some basic 101 or 102 for using this thing... the forums are a bit
over my head... I don't do

Intel CPU/chip set

Texas instruments firewire chip set

Are the biggest things to look for.

You want to avoid ones that use a Ricoh firewire/cardbus combo controller.
Which most of the cheap ones.

I was thinking of

, being Prog-oriented, is just as dinosaurish as his hairmetal. In other words, I realized I'm probably the guy HE makes fun of! lol

So, sorry to all for being so petty in raking the guy over the coals like that - his audio opinions notwithstanding.

Neill went through that myself as I was watching this stuff. I felt bad but then I thought about the people he's misleading and has taken money from and found myself somewhat confused between humanity and truth... but still feeling like it is a terrible disservice to the audio industry and I wonder how many expectations and dreams have been crushed by dealing with this guy and his company.

I wouldn't be a friend to anyone considering this 'service' if I didn't call it out, yano? I don't begrudge the dude anything, and I hope he can continue to do what he loves. He just needs to get more to the truth if he's gonna charge people for it and call it professional.

>>Neil the 2005 is the best compressor i have ever used period and i've tried about
20. it easily lets me smash the dynamics of bass, vocals, kick, snare, gunshot,
you name it to whatever dynamic you want without ANY work while preserving
the tone. WOW WOW WOW

loving it Funny; I was just using that this morning in the studio on an HD rig, and I
come here and it's a topic.

Stick it on a bus and blend it up underneath an unprocessed Music Man bass -
feels like a steel ball wrapped in a thick layer of hard rubber bouncing off
a stone wall. Wicked awesome.

- Kerry Mostly what Chris said, but a few caveats. I still think it's worth it to
go with a 'real' video card with its own memory. Shared memory isn't the
horrible penalty it once was but just anecdotally laptops with real video
memory seem both snappier with audio and more stable.

For the interface I'd go USB. I don't like the non-cardbus options (and you'll
likely be getting a non-cardbus laptop) and people seem to have the devil's
problems getting fw interface to work with laptops. I have a \$300 M-Audio
USB interface and it works great. Ditto my fancy Native Instruments DJ interface.

You need to be more diligent with laptops on the backup and security front.
Your locked front door adds a level of security to your desktop that you
won't have with a portable. Be more careful about private data and think
about some amount of disk encryption and maybe password protected VMs for
checking email and surfing.

I bought a fancy Dell a few months ago. After getting it

Yeah right!, that is just a perfect description of one of my goals in life
-to achieve maximum benefit from "the bass tone." That is poetry man. Freakin'
poetry. Thank you. MRGlad you liked the simile; you'll like the next part even more - the Music
Man (not mine, btw) had the deadest strings I've ever heard on a bass
manufactured after the 1960s.And you know how much of an impediment dead
strings are to getting "there" (although they can certainly get you to other
cool places).

I actually asked Warren (engineer and owner of said bass) if he'd been
rubbing butter, or maybe fried chicken, on the strings for mojo. Didn't get
around to trying my own basses on it yet, that's when I suspect the
fireworks might start.

Two thumb

Here's another interesting one for you metal players

<http://www.youtube.com/watch?v=OjONQNUU8Fg>Cool performance, but it don't really sound like a guitar.

When i was playing with Edgar Winter the keyboardist was Peter Schless (co-writer with Jeffrey Osborne of "On the Wings Of Love"). He is a monster player and he used to run his DX7 into a Walkman. I hated soloing after him when he used his "guitar" sound because he was so f/g good it was intimidating. He doesn't scare me any more (please don't tell him I said that).

>Not that I'm trying to defend or promote iLock, but I did figure out a sneaky iLock trick - I can boot Digital Performer on my outboard FX computer w/ the iLock so as to use the Waves IR reverbs then pull the iLock, plug it into my main studio computer and boot Protools so as to run the Waves stuff there. So one iLock can run all the computers for a big studio. Not that I have any great use for that trick since I use Paris... which keeps me in Mac OS 9 which eliminates most of the cool new plugins.

The thing that bums me out is that I'd have to buy a PC to run Paris on in Windows XP in order to demo these plugins! I've been on the verge of switching

to PC for that very reason for a while now but I don't even know if I could put a Paris PC together with what's available on the market now. Then there's the PC learning curve! I been a Mac guy for a long, long time...

Yep, I've been culling through the NG in my quest to assemble tips for
the Wiki and that struck me too; heck of a development tempo Mike's
been keeping up since last year - bodes well for the future.

Of course, I want to distract Mike with a couple of little not-directly-plu=gin-related ideas I’ve been tossing around. I think I’ll go post=on ‘em.

to wav's.
Any takers please email me at willtheweirdo@gmail.comHey there tone,

Yeah, I can bite that a "string" could be substandard, but not 3-4 in the
same set of six. Figure the statistical odds of this happening. Millions
to one in my estimate. You should be compensated with a years' supply (which
probably would only be about 5 sets) just to get you back in good terms with
the company. Sometimes these guys can underestimate the influence of word

of mouth.

Right on.Greetings.

For those of you with DirectX plugin woes, I have come across a wonderful DX wrapper plugin (vst), which has saved my bacon yet again with certain combinations of plugins causing popping, and even loss of audio.

This is a freeware VST plugin which allows you to chain up to four DX plugins, using just one Paris Native FX slot.

Better still, you can save these combinations as a preset.

Even better, you can simply drag and drop the plugins to rearrange their order in the chain.

I have been having problems over the years with certain DX plugins causing pops at the beginning of segments, but those same plugin combinations seem very stable when wrapped in this baby.

Of course, being a DX wrapper only, doesn't mean you can't use VST plugs. Simply use the "wrapped" versions you probably already have, courtesy of the FXpansion wrapper, and you are good to go.

In theory, this opens up the possibility of 16 native inserts

on any Paris channel.

I'm going to set up a template with one of these on every channel of my default project and use this as my new plugin manager within Paris. Just being able to reorganize the order of plugins by dragging/dropping, is worth it.

Not sure yet, but this plugin could solve the instability everyone experiences with paris and certain plugins.

It's available here:

<http://pagesperso-orange.fr/vb-audio/us/products/dxrack/dxrack.htm>

Scroll to the bottom of the page to get the freeware 4-slot version.

These guys also have a wonderful plugin manager, which allows you to disable unused DX plugins, without having to deinstall them.

You can reenable them at any time.

This is great for those who are tired of scrolling through a huge list of available plugins within Paris.

It's available here:

http://pagesperso-orange.fr/vb-audio/us/mm/plugin/vb_plugin.htm

It's little tools like these, as well as Mike's new EDS plugins which help keep my vibe on Paris intact.

I'm yet to look into the Faderworks plugin, but it looks promising.

KimOops, gave a little wrong information.

The ffx-4 is a DX plugin manager, in the form of a DX plugin. (not a vst plugin, as indicated).

The rest still stands.

> Right on.I'd concur with my experiences with it. Rim is a cool dude, and Dgog a cool product but IMO it's more for triggering a different sound. You can't really fix weak/uneven hits with any replacer, and bleed can be a real problem. Now, if paris had decent MIDI you could edit the triggered events pretty easily (assuming the newer versions of Dgog have midi output - I use external triggering myself) and kill the bleed/hit issues quick. The only reall way to get it right in paris is to edit each audio track into a 'trigger' event using cut/paste/gain/trim functions, and that's a big hassle across an entire drum kit's shell mics, and assumes that you have a track for each drum.

work in protools.

Is there anyway to open a Paris session in Protools?

Is there a way to convert .paf audio files to .wav 24bit / 44.1K

Is it possible to 'spot' the .paf audio files in protocols

If my only choice is to find someone with a Paris system to do the conversion, what should I expect to pay per song? (5min x 24 tracks)

thank you,

Jeff Carruthers

>Hi Jeff,

```

If there are a bunch of edits and overdubs in the Paris project you'll need to bounce the tracks on a Paris system. If the tracks are contiguous raw tracks you can use Peak or Soniqworx (I'm a Mac dude - don't know what the PC equivalents are) to convert from .paf to .wav. If you need help feel free to email me.

machine I've used with older design software and ULead video studio. The
2.4GHz is a MSI 648F Neo MS-6585 MOBO. This would be the Paris machine.
I'm also thinking about building a dual boot Hackintosh 6600 machine. At
the Moment I have many other priorities, including financial.

Aaron, I'm curious about what you and Jamie are using for your video production
rigs. What cameras, lighting etc. I've done wedding videos in the past
with mini DV cameras and I'm thinking about getting back in for supplemental
income. If you guys have time shoot me an email.
