cassete, moved to a Tascam 38 1/2",
eventually replaced it with a couple af DA-38s and then PARIS.

My first question is...where would you all go from here? I will eventually need some nice converters. Should I buy a Lynx Aurora or Appogee DA and AD-16x now (I have a big ben and it makes a noticable difference with the stock PARIS converters). Has anyone compared either to the stock converters at 44.1 with a good clock? How would that integrate with the ADAT module at only 20bit? (I noticed one of you all mentioning having to dither every track to 20 bit).

Maybe I should use what I have now, then when I'm ready, move to something

like a Nyquist RADAR and a real board? SX or Nuendo just seems more tempting because I'm half way there, and only need the converters, but I sure like the idea of a closed system such as RADAR or even the new TASCAM 48 track. The problem is I am sometimes frustrated with PARIS as it seems to have some issues with routing sound when I don't tell it to (I was recently doing a drum sub using an auxiliary mix to two new tracks and I was getting aux bleed, even when no auxiliary send was active). It's stuff like that that just makes me drop what I'm doing and go eat a doughnut or something.

Anyway, sorry if this post is a little confused, but I AM a little confused right now. Maybe I just need to vent a little bit, but hopefully a beneficial discussion can come of this.

Thanks,

Joey BeeMy CD player in my truck crapped out last week. I haven't had time to get it fixed so I bought one of those crappy things that plug into the cigarette lighter and use a cassette tape. I've been trying to use it as a reference for some burns. the converters are soooooo bad that I've been driving myself nuts trying to tame the 10k range with no luck. I just figured out that it sucks on just about every commercial CD I have here too.

Arrrgggghhh!!!!!! the time I've wasted on this POS!!!!

;oPThis is a multi-part message in MIME format.

sarily. Save plugin
presets that are commonly used and put a 0 in front of them
so they appear first in the list.

Hope something here helps,
Tom

In my setup I absolutely prefer NOT to dither to 20 going to Paris via ADAT.
If the final mix is 24 and will be dithered down to 16, you should judge
the results of the final 16-bit version rather than listening to the 24 bit
files in Paris. The single application of dither at the final stage seems
to accomplish the masking without as much noise.

I did try converting the DP files to 20 bit with dither supplied by Barabatch
prior to sending to Paris. This sounded OK, but was a lot of work.
GeneThanks Gene. My concern is with the perceptual aspects of the cumulative
quantization noise as it relates to harshness in the midrange. If I'm
compensating for that with EQ during the mix, then I may be subtracting
something I'm going to need later on.

I certainly trust your judgment on this as you've been at it quite a while longer than I and I would imagine that this isn't something that is jumping out at you or you would have addressed it.

The cumulative dither really isn't ugly. It's very similar to audible tape noise at 30 IPS at the tail of a track when a project has been tracked at sufficient levels and there is no noticable audible noise in the quiet passages during the song mix.

seconded, forgot it in my initial list. I've been using Paris 3.0 on first OS 8.6 and then 9.2.1 for years, but my computer (beige G3) is past its reliable service life. I'd like to upgrade to a G5 running OS10.3 or 10.4, but is it possible to use Paris? Specific questions:

- 1) Did an angel somewhere make an OS10 driver for Paris 3.0?
- 2) If so, where/how can I get it?
- 3) Will my Paris card fit in the G5's PSI/PSI(extended) slot?
- 4) Will it all work together reliably? Any potential glitches to be mindful of?
- 5) Since it's time to say goodbye to my Opcode 64X MIDI interface (which connects to the Printer Port of the G3), can anyone recommend a USB- or Firewire-type 8-channel MIDI interface? And what MIDI software would work nicely on it as a compatible complement to using Paris for the DAW? (The key issues would seem to be the MIDI software's ease of use, functionality, and ease of importing its MIDI files into Paris. Note: I've used Opcode Vision for MIDI up to this point.)

Your advice is much appreciated. If there are other issues I need to consider, please feel free to share.

Hi Richard,

No, unfortunately at this point you won't be able to use Paris or EDS cards in a G5. Also, forget about importing midi files into Paris, it won't happen.

I would suggest getting a dedicated box for Paris (pc or mac) and sync it to your G5 (that's what I'm doing).

As far as software for midi, I use Logic and Live on my G5.

I use a Tascam FW1884 for my midi ports which has been really solid, but it's 4 ports.

Personally I prefer to run Paris on a PC and everything else audio related on my G5.

Cheers,

TCI know Ashlee Simpson went blond, but I didn't know she cut her hair, too...

I couldn't hit the stop button. Thanks for this!

Chris

Ok, OK! Now we put the singer from Idol with the Deep Sunshine band, and ummm

waddy get?

Culture Club!

heh heh heh

DCRichard

As the others said, you don't want to use Paris for midi. I used to use Vision and Paris together seamlessly until I decided to upgrade my OS 9 to a later version and couldn't use Vision anymore. I went to Performer, which also still works seamlessly with Paris now, and THE most similar program to what Vision was like. I am on a G4 450 machine and have no problems.

If you want to see what is involved using midi with Paris go here

<http://www.parisfaqs.com/>

and scroll down to General Paris Settings and look for my write up on midi. Click on those words and you will read a tutorial on what is involved in setting it up and using it. Very complicated and not good. No looping, quantizing, etc.

Good Luck

Lou Guarino

>I'm extatic!! Thrilled! Over the frippin' moon!!

This morning I hooked up, for the first time, my planned live setup. A lot of mental energy has gone into this. A lot of planning. A lot of theories. A lot of documenting and changing my mind.

Basically the idea is that I'll have 3 keyboards, plus a Theramin and a guitar, along with three different effects loops, one of which is the Digitech GNX4 which also acts as a looping pedal. The GNX therefore allows me to record parts and build a song using all the other bits. I have a Behringer FBC1010 which controls all the routing of sounds done by two Akai MB-76's. Any keyboard or combination thereof can be routed through any effects unit or combination thereof. Any patch can be acheived.

I have approached this setup in a way most unlike me. I have planned it carefully in as much detail as I realistically can. Traditionally I've been a "Let's just do it and see what happens" kinda guy, but it seems lately I'm changing my approach and planning things, and it's working for me.

After spending several hours over the last couple of days programming both the AKAI MB-76 programmable patch bays, as well as the Behringer this morning, I then went and took everything out the back and plugged it in to some of the gear. So far just two of the keyboards and two of the effects loops (one of which is the GNX/looper).

What I loved was that I plugged the stuff in and it just worked. I'd planned it all so well that there was no mucking around. I plugged it in, punched in a program which would send a keyboard here or there, and it just went where it was told. I was thrilled. Well, not just thrilled...

This morning I actually literally jumped for joy. I was throwing fists in the air with passion and excitement, shouting "YES!!!".

I since discovered a couple of minor hickups in the realm of level discrepencies,, but nothing I couldn't overcome with some quick reprogramming of the Digitech.

Things are going swimmingly. Wonderfully. Absolutely fantastically.

The unfortunate thing is that it takes a long long time to plug it all in...
;o)

Cheers,
Kim.>The unfortunate thing is that it takes a long long time to plug it all in...

hehehehehe!!!!!!!!!!!!.....there's always something, right? Very cool Kim. Glad you've got this going finally. I've been following your posts about this.

;o)

> I've still got some tweaking to do I've discovered. There's some harsh digital
clipping coming from somewhere, the GNX I guess, which I've got to work out,
and two keyboards and the guitar are way louder than the other to the point
you can't hear the quiet one... which may require that I reprogram the
mix bays to turn all the others down on each patch. Or I could go option
B and run that keyboard through the mic pre for extra level, which may be
easier, and may yeild a better result as it will allow me to run hotter overall
through the system, hence less noise.

These things and more will be sorted out as time goes on, but overall I'm
stoked at the progress. :o)

Cheers,
Kim.

kind of ecstasy. Are you a solo act or setting this up to work in a band?
I seem to recall you mentioning that you were in a band, but maybe trying
the solo thing.

>Hi All

I just rebuilt my computer and everything is working nicely but I noticed
Wires is missing on the FX list...where can I find it?

thanks

Don't'd like to do some cheapo rough mastering in Wavelab.
My comp unfortunately has built in sound.
However, I am concerned that the audio output will not be accurate enough
Is it possible to add a higher end card on a MOBO like this?
Will it not really matter too much for rough (a little limiting/even over
all levels/ sequence) mastering?Found it...DUH!

Where do you purchase? I'm no pro with the soldering, so I need to get a snake to spec.

Last time I bought cables I went with Redco Audio, the company recommended by Mercenary for all cabling needs?

Anybody? It's a big investment, and I don't want to waste money.

JimmyI checked Chuck Duffy's site where I learned that an OSX driver for Paris is "not looking good..." and that "the [Paris] EDS-1000 cards are 5v PCI boards that operate at 33 MHz on a standard PCI bus, with a 32 bit data path. That means that the EDS cards will NOT work in the new G5."

"TC" of this group has suggested getting a "dedicated box" for Paris. Louis of this group has said he uses a "G4 450." And "Jamie K." wrote: "I used a dual 1GHZ G4 which was great for PARIS audio work (but for MIDI, fuhgetaboutit!). I think maybe dual 1.33 was the last G4 before booting into OS9 was left behind."

My questions:

Is the G4 (with OS 9) the last Mac model to work effectively with Paris 3.0 software and hardware, including the EDS card? If so, is there any reliable supplier of G4s these days?

Also, since I'm not able to buy state-of-the-art Mac equipment to work with Paris, is a PC box a good choice? (TC wrote: "Personally I prefer to run Paris on a PC and everything else audio related on my G5.")

If I go the PC route, will any model and year work? Or do I need to find a specific older model to accomodate Paris software and PCI card?

I greatly appreciate your advice."Mike R." <emarenot@yahoo.com> wrote:

> I seem to recall you mentioning that you were in a band, but maybe trying
>the solo thing.

Yeh, that'[s basically it. I'm in a band at the moment, but as per usual they're just giving me the irates more than anything. The idea of the band came about in January, and so far we know all of about 4 songs, and even though are pretty rough. Finding times to rehearse has been near impossible... anyhow... ;o)

But yes, I want to start a solo thing and dump this whole "I have to work with other people" idea. ;o) That's mostly what this whole setup is about. I figure to make the show as good as a band I need to have as much gear as a band. ;o) Unfortunately I'll have to lug it all myself, which will suck. Still, it is tremendously satisfying to build a whole song in seconds, and

I'm fairly confident that my playing skills will increase by a huge factor now that I can better rehearse on my own. Over the last 12 months I've been lucky to pick up an instrument once a week.

The hard part is going to be working on good ideas for transitions, starts etc. Creating a few loops is easy. Where it gets hard is mostly in the area of keeping things interesting while the loops play, because of course, a loop is just a loop, and hence kinda repetitive. Fortunately I do have some ability to remove individual loops and then bring them back which helps. The hard bit overall though will be keeping it interesting once the loops are playing.

It's a problem I'm happy to have though. ;o)

Cheers,

Kim.All you folks who clock Paris to an external source (Lucid, Apogee, etc.):

how much better does it sound?

5%?

10%?

40%?

Thanks!

JimmyThe latest P4 / motherboard combinations will work perfectly with Paris running XP

Keep in mind that some of the latest boards will have only PCI Express slots which of course are not Paris compatible. You need to make sure too that you have 5V compatible PCI slots, which covers most of the boards that have "old style" PCI. From memory any PCI standard that starts with a 2 will work. Don't quote me on that though. ;o)

Cheers,
Kim.A/D conversion I'd say 5%. D/A conversion, 10%

I've been running PARIS on a dual 1GHz G4 Quicksilver for a few years now,
and it works great. As long as you can load and boot from a separate install
of OS 9 you should be fine. I also use this same machine in OS X to run
Digital Performer 4.6 along with Mach Five, Drumagog, dfh Superior, a UAD-1
card, Sample Tank 2, Kontakt, many other AU plug ins, etc. and it also works
fine. Obviously, a G5 would allow me more tracks and plug ins, but the G4
gets the job done with few work arounds. Anyway, just though you should know

PARIS will run fine a G4 if you don't want to mess with going to a PC.

The last G4 Mac that ran OS 9, and was produced in large quantities was 1.25GHz or Dual 1.25GHz. If you want to buy An apple G4, I would try ebay. You can also buy a refurbished G4 from Apple from time to time on the Apple store page under special deals. You'll pay a premium price but you will get a one year warranty, and I believe it can be extended to a three year.

Good luck!

JamesDitto that on the 414. Nice stuff with that mic on a PNO.

>I'm no computer guru, but at least on my mobo its possible to disable the onboard sound and use a card. I use a Soundblaster card, though I've thought of upgrading. If they're still selling them, I've read good things about the M-Audio Audiophile card)(99 bucks). For the same price Emu's got a 24/96 card -0404. But, if I may, you might consider mastering in Paris.

You can either copy your 2 tracks to a new submix within the project you're working on, or create a new project and import the 2 track files. This way you get the benefit of Paris' sound, Eq's and plug in's, plus any DX or VST stuff you've got.

I guess I'm out of luck for that one.
I need to have use of the ADAT in and out, even
though I'm not synching to ADATS

No such luck with 98se?

Thanks,
Jeff

>>Well.....it's much cheaper to just buy more Paris converter cards, but for you guys out there who are using native DAWs with Paris, here's what I'm doing:

Using Cubase SX as n audio router for an RME HDSP Multiface AD/DA converter.....

I've got a pair of HDSP 9652's and a Multiface in my Cubase DAW. It is possible to patch the Multiface analog I/O across Paris submixes and use them just like Paris input and output modules when tracking.

Lets say the HDSP 9652's in the cubase native DAW are Card 1 and Card 2 and the HDSP Multiface is Card 3.

If I wanted to route the Card 3 Multiface analog inputs to the HDSP Card 1 ADAT 1-8 inputs, then patch the HDSP Card 1 ADAT 1-8 outputs to the ADAT 1-8 inputs of Paris, route the audio through Paris, then patch the Paris ADAT 1-8 outputs to the ADAT 1-8 inputs of Card 1 and then to the Multiface outputs, it works as follows:

Create project in SX with 16 tracks.

Set inputs of SX tracks 1-8 to Multiface analog inputs 1-8

Set outputs of SX tracks 1 through 8 to Card 1 HDSP ADAT outputs 1-8

Physically patch HDSP Card 1 ADAT outs 1-8 to second DAW inputs 1-8 and patch second DAW outputs 1-8 to HDSP Card 1 ADAT inputs 1-8

Set inputs of SX tracks 9-16 to HDSP Card 1 ADAT inputs.

Set outputs of SX tracks 9-16 the Multiface analog 1-8.

Now whatever is seen at the Multiface input is sent from the Cubase channel, output to the ADAT out of HDSP Card 1 to the ADAT input of Paris, routed through the Paris aux (for cue mix), returned from the ADAT output of Paris to the ADAT input of HDSP card 1 on Cubase Sx channel 9 and then the output of Cubase SX channel 9 is the the Multiface analog output.which is sent to a

cue mix system.

I've got 3 x MECs with 2 x ADAT modules in each one. Two of the MECs each have an A8iT and an A8ot. I've got routing templates set up to patch the RME converters to any 8 ADAT inputs of any of the three MECs so at any one time I can have 24 x 24 bit analog inputs with 8 of them routed to whichever MEC I choose. When used with the RME and Cubase direct ASIO monitoring, there is no latency....just a direct feed through with the samd appx 1.25ms AD/DA conversion latency that is inherent in the Paris system. This RAWKS!!

These RME converters sound really good too and even though they are being routed to/from 20bit Paris ADAT modules, it makes no audible difference since it's doubtful that they are evercapturing even 20 *true* bits.

Pretty cool.....and soooooo simple. ;o)This is a multi-part message in MIME format.

news:432f9331@linux...

Well.....it's much cheaper to just buy more Paris converter cards, =
but for

you guys out there who are using native DAWs with Paris, here's what =
I'm
doing:

Using Cubase SX as n audio router for an RME HDSP Multiface AD/DA
converter.....

I've got a pair of HDSP 9652's and a Multiface in my Cubase DAW. It is
possible to patch the Multiface analog I/O across Paris submixes and =
use
them just like Paris input and output modules when tracking.

Lets say the HDSP 9652's in the cubase native DAW are Card 1 and Card =
2 and
the HDSP Multiface is Card 3.

If I wanted to route the Card 3 Multiface analog inputs to the HDSP =
Card 1

ADAT 1-8 inputs, then patch the HDSP Card 1 ADAT 1-8 outputs to
the ADAT 1-8 inputs of Paris, route the audio through Paris,

then patch the Paris ADAT 1-8 outputs to the ADAT 1-8 inputs of Card 1 and then to the Multiface outputs, it works as follows:

Create project in SX with 16 tracks.

Set inputs of SX tracks 1-8 to Multiface analog inputs 1-8

Set outputs of SX tracks 1 through 8 to Card 1 HDSP ADAT outputs 1-8

Physically patch HDSP Card 1 ADAT outs 1-8 to second DAW inputs 1-8 =
and
patch second DAW outputs 1-8 to HDSP Card 1 ADAT inputs 1-8

Set inputs of SX tracks 9-16 to HDSP Card 1 ADAT inputs.

Set outputs of SX tracks 9-16 the Multiface analog 1-8.

Now whatever is seen at the Multiface input is sent from the Cubase =
channel,
output to the ADAT out of HDSP Card 1 to the ADAT input of Paris, =
routed
through the Paris aux (for cue mix), returned from the ADAT output of =
Paris
to the ADAT input of HDSP card 1 on Cubase Sx channel 9 and then the =
output
of Cubase SX channel 9 is the the Multiface analog output.which is =
sent to a
cue mix system.

I've got 3 x MECs with 2 x ADAT modules in each one. Two of the MECs =
each
have an A8iT and an A8ot. I've got routing templates set up to patch =
the RME
converters to any 8 ADAT inputs of any of the three MECs so at any one =
time
I can have 24 x 24 bit analog inputs with 8 of them routed to =
whichever MEC
I choose. When used with the RME and Cubase direct ASIO monitoring, =
there is
no latency....just a direct feed through with the samd appx 1.25ms =
AD/DA
conversion latency that is inherent in the Paris system. This RAWKS!!

These RME converters sound really good too and even though they are =
being
routed to/from 20bit Paris ADAT modules, it makes no audible =
difference
since it's doubtful that they are ever capturing even 20 *true* bits.

Pretty cool.....and soooooo simple. ;o)

you =
guys out=20

there who are using native DAWs with Paris,
here's what=20

I'm
doing:

Using Cubase SX as n audio router for an RME HDSP =

Multiface AD/DA
converter.....

I've got a pair of HDSP =
9652's and=20

a Multiface in my Cubase DAW. It is possible to patch the Multiface = analog=20
I/O across Paris submixes and use them just like Paris input and = output=20
modules when tracking.

Lets say the HDSP 9652's in the cubase = native=20
DAW are Card 1 and Card 2 and
the HDSP Multiface is Card = 3.

If I=20
wanted to route the Card 3 Multiface analog inputs to the HDSP Card=20
1
ADAT 1-8 inputs, then patch the HDSP Card 1 ADAT 1-8 = outputs=20
to
the ADAT 1-8 inputs of Paris, route the audio through = Paris,
then=20
patch the Paris ADAT 1-8 outputs to the ADAT 1-8 inputs of
Card 1 = and then=20
to the Multiface outputs, it works as follows:

Create project = in SX=20
with 16 tracks.

Set inputs of SX tracks 1-8 to Multiface analog = inputs=20
1-8

Set outputs of SX tracks 1 through 8 to Card 1 HDSP ADAT = outputs=20
1-8

Physically patch HDSP Card 1 ADAT outs 1-8 to second DAW = inputs 1-8=20
and
patch second DAW outputs 1-8 to HDSP Card 1 ADAT inputs = 1-8

Set=20
inputs of SX tracks 9-16 to HDSP Card 1 ADAT inputs.

Set = outputs of SX=20
tracks 9-16 the Multiface analog 1-8.

Now whatever is seen at = the=20
Multiface input is sent from the Cubase channel,
output to the ADAT = out of=20
HDSP Card 1 to the ADAT input of Paris, routed
through the Paris = aux (for=20
cue mix), returned from the ADAT output of Paris
to the ADAT input = of HDSP=20
card 1 on Cubase Sx channel 9 and then the output
of Cubase SX = channel 9 is=20
the the Multiface analog output.which is sent to a
cue mix=20
system.

I've got 3 x MECs with 2 x ADAT modules in each one. = Two of the=20
MECs each
have an A8iT and an A8ot. I've got routing templates set = up to=20
patch the RME
converters to any 8 ADAT inputs of any of the three = MECs so=20
at any one time
I can have 24 x 24 bit analog inputs with 8 of them = routed=20
to whichever MEC
I choose. When used with the RME and Cubase direct = ASIO=20

monitoring, there is
no latency....just a direct feed through with =
the samd=20
appx 1.25ms AD/DA
conversion latency that is inherent in the Paris =
system.=20
This RAWKS!!

-----=_NextPart_000_019C_01C5BD76.5DFBC9A0--So what happens if I just plug in a mono 1/4
inch jack, which I'm guessing
will simply short one of the balanced pair to ground. Is this bad for the
preamp or is there so much resistance in the circuit that it doesn't really
hurt it because it's not that bigger short (because there's resistors elsewhere
in the circuit)?

Just wondering if I need to wire special leads for this...

Cheers,

Kim. This is a multi-part message in MIME format.

If the output of the pre is transformer coupled, you must tie the negative

If the pre is electronically driven, you should generally let the negative

GeneYou can use the wires under 98and |Me.

Just install the subsystem as you would do if you had XP.

I run Me and I have the wires showing up.

I have never tried under 98SE but I assume that if Me does it why not
win98SE

Regards,

Dimitrios

It's an electronic pre, so I guess I'll have to go the "keep the negative
lifted" route to be sure.

Thanks. :o)

Cheers,
Kim.

>Yeh.....the starved plate thing. I did own a DBX compressor a while back that used a tube circuit in this way to extremely dramatic effect. I think it was called a model 566. For this particualy application, it worked pretty well and it could be removed from the signal flow if desired. That's about the only example of this technology that I've ever ever heard that I liked.

I've got a coupleof hybrid preamps here.....a Demeter HMP-1 and a TL Audio 2001. Both of these supply around 200v to the tube circuit, so it's a bit of a different animal.

After installing a new power supply with no change I took it to my local PC shop.Turns out the processor is dead.Thats lame but also its still under warranty so EastCoast should be able to

change it out no problem.I guess its kinda weird for a 1 1/2 year old processor to go dead;comps,you gotta love 'em.

Anyway now I can get my money back from the power supply I just bought since I just got a MAGMA 13 slot;now I'm running with the big boys.

Anyway thanks again,
Petel think there is a PDF up there somewhere for it, but essentially think of it an extra set of sidechain busses.

LED's to light up a tube. Hey! next, they could have a processor that can tell when you bend the string on your guitar to *just the right place* and would then light up a big LED "thumbs up" on the front panel...

Or how about a pitch corrector that shows a pair of big red LED lips on the front panel smiling when the pitch is being fixed?

Or a limiter that lights up the words ouch! ouch! ouch! in LED's across the front panel when it catches a peak that would have clipped something!

Yeah, that's what I need from a tube box. LED's to warm it up!

Stick with Jim Demeter, Summit, Fearn, and all the other great designers of actual tube gear, and forget Behringer...

just a thought...

I already had a speaker wired to be used th same way, and I thought it sounded
OK...kind of frumpy, but in the mix, it gave the kik some extra oomph. The
Yamaha sounds much better to my ears. Nice ebay snag if I do say so!
RodGood call with the manual. Manual has no mention of unbalanced signals. I
guess I'll have to work on the idea that it's balanced only, and have the
negative lifted.

Thanks for the help.

Cheers,
Kim.
