tic. Shouldn't be a problem right? Ideally it

end of the preamp.....sorta like an audio suppository.....however, as
much as I enjoy the occasional crawl through the snakepit behind the my
racks and the contortionistic mojo that I have to do to insert these into
the nether regions of the preamps, I would much prefer to plug these in to
my switchbox between the mic cable and the rest of the snake that carries
the signal from the tracking area to the preamp. Is this a major FU. Will
attenuating the signal 100' from the preamp cause massive signal
degradation? This would only be done when micing a drum kit, never for
vocals or acoustic instruments. Sometimes I need LP's on my Sytek or
Forssell JMP-6 if I'm using them on head mics
