It's an quite BIG project with more than 100 tracks, all edited in Vegas and mixed in PARIS, all in my little studio.

Last year, I composed the music too, but whole thing was canceled because of some screenpl

n stiff, hard reset, then box wont even boot, all fan and HD spinning but no beeps. I reset the AGP and PCI cards and the computer comes back to life but my displays have all changed resolution and the Matrox 450 will not let me set them back to 1280 x 1024, tells me to check my device manager

which is fine, no flags anywhere. Meanwhile, the client shows up and starts to warm up in the booth. I whip out the old Norton boot diskette and re-load an image from Jan 10th. Back in business, displays are fine and the client never even noticed. Lesson to be learnt, ghosting is your friend.....!!

The Paris submix clip lights are lit up like a Christ mas tree when the singer pipes up and says....."man, that sounds great, but I need more level on the vocal". The engineer (being me) just grins and pushes up the fader on the Paris track. It doesn't clip.....it should, but it doesn't.

;oDNo way. It's embedded now.

;o)

>I generally stick to recording my tunes in my studio. Freakin' navel gazer. Anyhoo, some kids here in town have pretty hip metal band going and they asked me to do some recording for them. My space is teenie, so they got a local theater -on the second floor of an old local town hall. Loads of 1920's soul. I unhooked my Paris rig and computer, hooked it back up again at the theater, ran eight lines in, and presto -what a great sound. Man, even the rough mixes, just tossing the faders around, and I got some great tones. Two things were especially cool for me. First, even with my high tower computer Paris is really very portable. Second, this was my first time tracking a band, I usually just track midi stuff, so working with warm bodies playing real-time was quite nifty.

We're going to tracks some vocals tomorrow, so there's still more fun to come... and then we're on to mixin' hehe.

Cheers,
MRI've never been before, but hey, five stages playing jazz for three and a half days... how bad can it be?

Hopefully when I come back I'll be interested in music again! ;o)

<http://www.inverlochjazzfest.org.au/index.html>

Cheers,
Kim.....I heard this was an *alcohol free* venue.

I wouldn't have a clue actually. Could be, but if it is, well I'll have to skip the jazz at one point and go to a pub. The festival covers the whole town, so there must be somewhere selling alcohol as well as playing jazz...

....surely...

....isn't there...

....there must be...

....?? ;o)

Cheers,
Kim.

>pabBurned a CD last night of the all of the final mixes/masters. The client loves it. There are still some things that are making me cringe.(sigh).

We're going to give it another good listen today and make notes song by song (should have done this weeks ago but there were a number of things that slowed this down) Remixes should go quickly if called for. The issues are small ones and as the client says....."man, nobody but you would even hear that". It's really a matter of what kind of playback device is being used at this point. There are some things I hear/don't hear on my car stereo that aren't even noticable on bigger systems, but since this is where people listen to music, I want to address these issues.I have compared this mix to some other c
