---=_linux431ffa63--Hi,

I wonder if the Paris adat sync out of card's a mec can send sample accurate sync...

I have read on an old post that is used minly for transport controls.

But if it is used only for that then midioverlan sending MTC is adequate for me.

I am asking because I am using on second PC Creamware's pulsar cards and I could get the sync plate for pulsar which has 9 pin adat connectionns along with extra wordclock in/out.

So if the sony out from Paris would start my Cubase with ALWAYS sample accurate positioning, instead of MTC which is not alklways sample accurate (without using the wordclock in/out) then this would be great.

Regards,

Dimitrios that's one big ass hot tub...but i can't see how those little bubbly

jets will work when you're not actually in the water. just call me
einstein 2.

>Hello,

I am not new to PARIS but I've been away from music for a few years. I've
dug out my PARIS system recently and started aquiring gear to augment the
system. I have been lurking here and at gearslutz.com for several months and

have learned quite a bit. I see that some of you are using other DAWs with PARIS. I'd like to do the same. I also have some decent outboard gear I'm using. I've included a photo if anyone is interested. I hope it shows up.

Right now, I have PARIS set up on it's own, using some outboard gear as inserts and aux. FX. I've also found a way to use the Aux sends as busses so that I may strap stereo dynamics across a multiple track sub. I do very little editing, and don't really use any PARIS effects. I essentially am using PARIS as you would a tape deck and desk, I do use the editor for track alignment with multi mic sources, and I will on occasion remove a flub, but I did that with mutes back in the day anyway.

I have a second computer running SX which has an RME HDSP 96/52 in it. I really only use it to transfer SX tracks from another studio into PARIS, but I think I'd eventually like to either begin recording into SX or even upgrade to Nuendo, and simply use PARIS as a mixer. The main reason for this is to use the SX latency compensation. I also have a couple UAD-1s and some soft synths that I may or may not use (I have 8 analog channels of decent compression and EQ, and prefer using these, printing them to disk as I need more channels). My ultimate goal is to eventually replace PARIS with either a mixer (probably a neotek) or a summing box (probably an API). The biggest problem is that PARIS is SO easy to use for me compared to SX. I'm from the old school. Learned on a 4 track cassette, moved to a Tascam 38 1/2", eventually replaced it with a couple of DA-38s and then PARIS.

My first question is...where would you all go from here? I will eventually need some nice converters. Should I buy a Lynx Aurora or Appogee DA and AD-16x now (I have a big ben and it makes a noticeable difference with the stock PARIS converters). Has anyone compared either to the stock converters at 44.1 with a good clock? How would that integrate with the ADAT module at only 20bit? (I noticed one of you all mentioning having to dither every track to 20 bit).

Maybe I should use what I have now, then when I'm ready, move to something like a Nyquist RADAR and a real board? SX or Nuendo just seems more tempting because I'm half way there, and only need the converters, but I sure like the idea of a closed system such as RADAR or even the new TASCAM 48 track. The problem is I am sometimes frustrated with PARIS as it seems to have some issues with routing sound when I don't tell it to (I was recently doing a drum sub using an auxiliary mix to two new tracks and I was getting aux bleed, even when no auxiliary send was active). It's stuff like that that just makes me drop what I'm doing and go eat a doughnut or something.

Anyway, sorry if this post is a little confused, but I AM a little confused right now. Maybe I just need to vent a little bit, but hopefully a beneficial discussion can come of this.

Thanks,

Joey Bee

Interesting link. Chock full of ignorant bravado and riddled with logical fallacies. Proof through aggressive assertion and repetition, generalizations, simplistic metaphor, thin on facts, heavy on allegations. Nice rant. Long. Off the mark. I'm not surprised that comments were removed. Very entertaining.

If anyone wants to dissect it further, start up a thread on PARIS/general.

Cheers,

-Jamie K

>Aaron.....the 9 pin sync works in XP and spits out sample accurate TC to
my RME HDSP 9652. There's no problem with the locking up at all. I don't
know if this would work with the Pulsar, but I do know it works with RME
hardware. The problem I discovered with using ADAT cards with Paris XP is
that it's almost impossible to get more than one ADAT module working *per
MEC* plus, the Paris XP driver won't *see* an ADAT machine (maybe not a big
deal unless sync'ed transfers are needed to/from ADAT tape)

;o)

(Cubase SX 1.06) it just won't work with an adat. and you may or may not

be able to get more than 1 adat card per mec

and notes need to be made for each track.

I'm listening to something right now that needs a de-esser on parts of the

lead vox of a song. We were in a hurry and it slipped through the tracks.

;o(There's only one thing to do at this point IMO. Decline on principle that what they want is not possible/realistic - if they still don't get it, offer to render the tracks out to the format of their choice for that song. Don't let the client beat the crap out of you because they don't want to spend the proper amount of time on it on the clock. If you're doing spec work, that's different but I get the vibe that's not the case.

> I agree. I'm just now starting to have a somewhat busy studio. I'm not
really used to mixing this much and I just don't have certain techniques
hard wired into my methodology yet. There are just some things that I could
be doing that would provide a more thorough analysis during the first
roughs. I'm also doing dumb things like grabbing an EQ too quick, before I
really have time to let the levels and panning sink in when I push the
faders up for my first listen.. It is dumb newbie stuff. I'm just in too

much of a hurry and I'm losing time by trying to save time. It's also still an unfamiliar way of working with SX because I used to mix while I was tracking in Paris. In SX, I'm starting from scratch with each song so this is a bit wierd to me still. I know mix engineers who take outside work do this all the time. The hat is just not comfortable yet.

I'm still

-----=_NextPart_000_001B_01C5B4DF.5180A820--so...how does this disprove the subject line?
all i got out of it is
that your ears work fine.

;o)

I was saying that it worked. I just couldn't vouch for anything beyond that,
as I had no personal experience with a pulsar card.
:-)
Rod

>DOH!!!! Sorry Rod. Yesterday was hectic. I totally misread your
post.(obviously). Glad you've got this working with 1.6. I wish v1.6 still
had ADC. For my needs at the time, the Dakota worked fine. The RME cards are
a bit pricier.

---=_linux43222cdd--What is the supposed date of this picture having been taken?

I ask this because according to easily verifiable info elsewhere, it seems
that Bush could not have caught any fish today.

<http://www.whitehouse.gov/news/>

DubyaIt's a Photoshop "artist's" pitch to get work for the National Enquirer.

Decent Photoshoppage, though!

....made me laugh, anyway.

> Once I get the wav files transferred from RADAR24 to my Paris rig, then
converted to pafs (this seems to take an eternity), for song demos I
generally average around two and a half to three hours per song for comping,
tuning, editing, automating, etc. If I'm really humping, I can get it done
in two, but I generally always have to go back and tweak those quick mixes
again a time or two, just for my own satisfaction. Things that are artist
demos, or master stuff, I might take more like four to six hours on.
Generally, the better the singing & playing, the less time it takes.

It's a joke.

>Well of course it's a joke! sigh... Everyone knows the best fishing is about 4 blocks from where this photo was taken. Obviously a fishing-challenged photographer....

So, where can I sign up for a never ending vacation? I've tried the lottery office, but there's some prerequisite of a "winning" ticket, or some such nonsense.
