have audio, but I had to push the synth outputs back into a sound card -

they will not record in the bounce until converted to a wave file. Existing wav's in the project will bounce. As I recall, the process was to highlight the track you want to 'render', and go to edit and bounce to clips / bounce to tracks. This will give it a reaaaall wierd name and you'll have to figure that out by getting the track properties, OR keep the render folder open for the appearance of a new file and then move or copy it out. Kinda of a pain, but it worked and I was at the time working on a client's machine w/o a manual... there might be a better way. You can also look on the net for the 'cakewalk audio finder', it's a useful tool as well if he's going to continue to work in CW. I would heartily recommend he move to sonar asap, it's a much better tool, especially for audio manipulation including looping Acid style. And the synch internal and external is miles ahead of the old cakewalk software.. unlike Acid, hehh.

>>Tom,

I been using Paris with a dual Pentium for MANY years. However, I remember a few years back some talk between Brian and others that the AMD dual was the problem. I do get sporadic lockups and uncomplete shutdowns. So I was trying to find the culprit by restoring from scratch (since I was at a slow point in recording). I am beginning to believe that Windows is the problem, not Paris. Of course, try to tell that to Microsoft and they'll ignore you or certifiably claim it is not their OS. I don't know the source code to the XP drivers, but perhaps that has something to do with it (I'm using Win 2000). Many have claimed XP is the same as 2000 for the drivers, but I question that because all audio hardware companies I am familiar with issue drivers for 2000 separately from XP. And I don't use XP and never will. Please don't ask why, but I have many reasons... cost is one of them, when the product isn't worth two cents. My opinion... anyways... I am still hoping to find the probl

the price has come down a lot. I'm not sure if Kurzweil is even in business any more.

> now to play sample libraries. By voices, I was just referring to sounds,

Ohyeah!!!.....synth voices.....DOH!!! I always called them patches but oh well.....my bad. It's been so long since I've used synths, I forgot the terminology.

> but I do like to use some background voices for church music work. My JV

> has a couple that are fair. It also has a decent piano and some nice pads.

> apparently were written by engineers, not musicians, and took me several

> months to get through.

The first sequencer I tried to learn was a Boss DR5. It almost put me off electornic music for good until one day the lights came on.

>I do have a couple other computers I could dedicate

peripherals/programs  
> under 98se.

The Barton, or 1.33 would probably work well as a Paris rig. Even the  
Celeron if you're not using too many native plugins.

I have Paris on my P4 with 1GB ram. I could put Paris on one  
> of the others and use the P4 for the cpu intensive work. I have OCed the  
> P4 to 3.1GHz with good stability, although I have it running stock now  
while  
> I am working with/learning the Paris app.

This would be much more effective for streaming VST instruments. Generally  
speaking, it's good to have as much CPU and RAM as you can afford for VSTi  
performance.

Also have noticed that everything  
> is now 24/96 it seems. Is there really a lot of noticeable difference  
from  
> 20bit, at least in Paris?

I notice some when playing back in a 96kHz environment. Once the audio is  
sample rate converted and dithered down to 44.1kHz/16bit, the difference is  
hardly significant at all. Once this is further butchered to MP3, there is  
no advantage to 96kHz recording, IMHO.

> Thanks much,  
> Edna

You're welcome.....;o)

Do you have the onboard sound card disabled in the bios? If not, give it a try.

im knows, I talked with him too in over an hour as a test when I got the system up and running, with a quality like he was in the neighbourhood:-)  
I've talked with Steve too in California with the same result. I'm using a normal analog phone going to a converter coupled to a switch for the ADSL modem. It's the best telephone service I've had in my whole life and it costs me just about 22\$ a month to have free calling to nearly the whole world. The only thing that isn't free yet is the mobile callings but I know they're working on it with beta testings in these days.

>I know this has been discussed before, but what is the  
most current version of Waves that can run w/ Paris?

I just tried the Transformer Bundle demo in Digital Performer.

The Soundshifter plugin is amazing! I'd love to be able to run it in Paris, but I haven't been able to run anything more recent than Waveshell 3.2.

Thanks,

Gantt Seriously, this is a sad story. It's motivated me to double check my DIY power distro I made for my band. I followed proper procedure, but the thing gets banged around a lot, so better safe than sorry.
