>The UAD version with the Helios (pre Neve 88) seems to be OK...unless I'm missing something. I've been bouncing every mix twice (not 3 times yet) and till this past weekend that has worked, it got too bad for the on Sat. When I did a spdif bounce however, there were no crackles. I know, your saying, just do spdif bounces. I can do that, but it's a huge hassle as I'm set up to monitor thru my spdif into the DAC-1 and the way my gear is setup I have to break both my neck and arms and pull a Houdini to get to it. When I did it for a test this weekend, I accidentally unplugged a cable somewhere in the mess and it took about 3 hr to get everything taken apart and put back together to fix it.
