See this seems to be the problem.

I assume what DC is talking about, "AVR", means that it will actually do something about brown outs.

Cheers,

Whether it's like you say and the outage is too quick, or whether it's like others have suggested and the outage is not big enough to cause the UPS to kick in (but big enough to effect the server)

>>Speaking of contracts, this may be asking a lot, but here goes. Does anybody have a work for hire contract(s) they could send me? There use to be software available from MIX Book shelf, but I have no idea if anything is still available anymore. I need something that will stand up if challenged.

Basically, looking for something to the effect of, you been paid, so any work or contribution becomes part of the work and you have no rights to any of the work. You will be credited for performance only, no song writing credit, etc.

Maybe somebody could point me to some boilerplate contracts?

I hope this isn't asking too much.

Thanks in advance!

James

excelsm@hotmail.comJust got an ADAT card. Wondering how I might set this up:

I'm looking to patch channels off the 8-way lightpipe in directly to an 8-channel out (ie, a Send from the 2408 through the lightpipe). Then I'm trying to direct patch the corresponding 8-channel ins back to the 8-way lightpipe out (ie, a Return via the lightpipe).

Make any sense? I've gotten used to all the bells and whistles in Cubase but I still just *like* the sound of the PARIS converters vs the 2408 converters. So I'm trying to use the lightpipe as a big ol' FX loop.

I'm running a single-MEC system on XP. One active 8in (i have a second in but have already gone into the patch bay and swapped it out for the ADAT card), one active 8out, and one ADAT card.

Doable?Within limits. The unit's specs will tell you what the voltage range it can correct for is. AVR works well for us, but the fluctuations are usually within 15% or so. Again, it depends on the unit. Consider the range of voltage correction when you pick a unit.

One of our clients tried to run a new, rather large sound system off one 15-amp circuit that had other stuff on the same circuit (!) We warned them, but they didn't want to spend any more money. One day they turned on too much stuff at once and the speaker DSP manager lost its program file and put out a spike that blew up all their HF drivers. 4K later, they upgraded their mains power and we put a good UPS on the processor. No problems since

Here, if you suspect fairly large voltage drops or spikes, the power

company can often be prevailed upon to put a monitor on your line to diagnose what is going on. I don't know if your power co. provides this service, but it might be worth a call to find out. It would tell you what ranges you need to correct for, and you never know, the sparkies may find a bad local transformer.

best,

DC

That's a great idea about the power company. I'll give them a call tonight. If we're lucky, as you say, they'll find a fault in the street and will be able to fix it and we won't have to spend a dime. (not that we have dimes down here ;o) I've never heard of anyone getting monitoring gear put on, but then I've never known anybody with a problem like this.

Definitely worth a shot. Fixing the power is by far the best way to fix the problem.

Cheers,
Kim.

(859) 635-5762 Well the power company has been and gone. They have no magic monitoring device which keeps an eye on your power unfortunately. They checked all the wiring out the front, saying it's all new, and left.

On the other hand they did say that there have been power problems in the area, but he said they solved it all about two weeks ago. Funny he said that as the UPS was making strange clicking noises up until about two weeks ago, so I'm guessing that may have been related to it. I'm also suspicious that there may be some other problem that still hasn't been solved. Maybe it's just a matter of waiting a week or two for a couple more people in the street to make complaints so they go and find the actual fault.

In any case the server has been running fine since I started this thread. Let's not panic quite yet...

Cheers,
Kim.

I'm actually pretty solid now back in win98.

I tend to push paris past what it wants to do also. Adding /removing
plugs while playing, turning on / off looping while
playing.....basically doing what is intuitive to me but paris no likey.

I'm getting much more solid by just using it for tracking only and not
dinking with it while tracking, then doing mixdown afterwards adding in
plugs and such.

I don't know if PT lets you add/remove plugs while recording/playing but
it sure would be nice. Thanks.

>AD/DA then yes that will work.

Yes, that's EXACTLY what I'm trying to do.

Maybe I'm just clueless. I don't have an ADAT manual, so let me describe
what I've done so far:

Installed back card
Installed front card
Connected 2408 to ADAT card with lightpipe only (no sync connection)
Started PARIS 3.0
Opened patch bay
Configured "MEC Modules" to include ADAT in (1-8) and A8i (9-16)
Configured "MEC Modules" to include ADAT out (1-8) and A8o (9-16)
Patched ADAT in 3-4 to A8out 3-4 to PCM90
Patched PCM90 to A8in 3-4 to ADAT out 3-4

The 2408 shows that it's sending from SX on ADAT 3-4 but nothing comes back.

The ADAT card has two solid green indicators on it; "optical lock" changes
from blinking to solid (as I would expect it to) depending on if the 2408
is present or not.

Breaking the loop and patching ADAT in 3-4 to the mixer doesn't yield any
joy, either. I'd expect to see the signal inbound from SX appear at the
mixer in that scenario but it doesn't.

I'm using 24bit and 48K in Cubase and PARIS. The clocking is currently derived
from PARIS SPDIF. I've been using the SPDIF connection in this fashion for

a few months now and it works very well indeed.

Is there some other process required? I see that clicking on the ADAT module brings up what appears to be a "remote arming/transport" window but PARIS tells me that doesn't apply since there isn't a remote ADAT.

Any advice would be helpful. I guess I just kinda figured that the ADAT card, even though it would truncate to 20 bits, wouldn't have any trouble with a 24-bit lightpipe and I'd be able to basically mirror my SPDIF connection (digital in patched directly to analog out, analog in patched directly to digital out). Like Chris said, basically using PARIS as a digital mixer for zero-latency monitoring and improved conversion.

Thanks! Did you run any "patch cables" inside the Paris patchbay window???

David.

recording, (especially), or playback.

No system is designed to do that, and no pro would do it whilst recording,
(at least none that I know).

I was constantly pushing Paris past what it was designed to do, especially
on XP, and never had issues with stability, just functionality, in that I
was trying, mostly successfully, to run video with it

For me, it came to a point where I needed more from Paris than it was able
to give. in terms of video support, so I went to Nuendo....but.....it
certainly doesn't sound as warm and forgiving as Paris.

with the video work I do, it's not a great problem and it's more than
compensated for by the ease of use and editing variety that I can perform,
plus plug-ins delay compensation...with video timing, that's a "must"

Regards

Martin Harrington

Yes. I'd "soft-patched" digital to analog using the PARIS patchbay.

So I fired everything up tonight using the same config and it worked flawlessly
all night exactly as you and I would have expected. Go figure. Can't really
explain what was garfed up last night.

Maybe it was the burnt offering where I called upon the spirit of Mr. Simplicity.

Or it might just be time to check the meds again. :)

Bless both your hearts for your timely attention and assistance. I'll ping
back if it acts up again but I'm fairly confident it should be good now.OH man. DeeJ will have to
have this or he'll.....

> Apparently tomorrow night, "Canada clashes with Norway in curling".

Ummm...I'm not a curling expert, but have seen it in the Olympics before...shouldn't that be something like "Canada bumps into Norway in curling"?

Or maybe "Norway brushes with Canada", or "Canada slides and collides with Norway"?

Maybe the announcer has never seen curling. Seems to me "clashing" would be the one move guaranteed to lose the match.

DTPaper ballots would be fine by me. Redundant oversight by election officials representing all parties would be fine too. I wouldn't give a flip if it took a week or two to count the votes. The media would probably hate this because of the *need it now* mindset, but too bad. I think exit polls should be outlawed. the voters need to be responsible enough to show up at the proper polling stations during the hours when the polls are open.....no excuses, no exceptions and no one should be allowed to vote without a voter registration and verifiable picture ID/ proof of citizenship. All voter registration should be completed 60 days so that registrants can be vetted and validated.during that time. Provisional balloting should be severely restricted or disallowed altogether. If you can't prove who your are and that you have the right to vote and you aren't capable of keeping your affairs in order to properly exercise you voting right within the legal guidelines and timeframe, you're SOL.

Agreed, absolutely. And it's entirely possible to count paper ballots in a few hours.

> I think exit polls should
> be outlawed.

That's a tough one. First amendment issue.

I agree somewhat, except if shenanigans are being pulled to disenfranchise voters by underserving certain areas (long lines discourage voting), or if ID systems amount to a poll tax, which is

illegal. ID is important, though. Also, 60 days is probably much longer than necessary.

We can agree or disagree here and there, but the gigantic issue towering over the rest is that the voting system is fast becoming untraceably corruptible on a very wide scale. That must **MUST** be fixed, and soon.

Unfortunately the chairman of the committee who needs to approve changes is blocking any attempt to fix HAVA, (he's from Ohio, home of Diebold). Counties are itching to spend HAVA money now if they haven't already, most interpret the law as mandating immediate spending which leaves them choosing insecure systems. It's not only a huge waste of tax money but a direct threat to your vote.

Cheers,
-Jamie

The more I use Paris the more I see how it is intended to be used. For example when I'm tracking a guitar and the vocal is playing back I would try to add a compressor, reverb etc and dial it in while tracking the other instrument. I'm learning what is and is not allowed in Paris world still and am getting more stable as I learn best practices. But what's intuitive to me is not necessarily what Paris allows.

Rock on,
John

core processor.

```

With just /intaffinity, the transport would be locked up almost immediately.
I could never use the C16 for anything.

With /intaffinity and /onecpu (/intaffinity probably unnecessary), it works fine with no lockups.

For me, this is acceptable as I can reboot and do my video editing work with both cores engaged. I don't need more horsepower than one core for Paris.

It seems like there was a way to force which processor was tasked to handle the interrupts and its also possible to set the application to just one processor. This may be another possibility that I'll look into later.

And really, how bad could a 42lb piece of rock hurt sliding 0.01 miles an hour on ice? ;-)

I think you have it backwards. Hockey is curly divided by pi, with the bristles removed from the brushes.

> Bruce Schneier has written about this extensively. Both electronic and non-electronic
voting systems can be used fraudulently, and both have been.

http://www.schneier.com/blog/archives/2004/11/the_problem_with.html

Non-electronic voting systems are usually used fraudulently in ham fisted ways like taking sacks of Joe Kennedy's cash to West Virginia to buy it for his boy. Electronic ones are used differently when fraud is the goal. Any rational US citizen should want accurate vote tallying and good electronic systems (as Schneier points out) can make that result more likely. Bad systems almost assure bad tallies.

BTW - Democrat bellyaching about voter fraud rings rather hollow to one with a solid understanding of US electoral history. Capitol D Democratic political machines all over the East Coast and in Chicago and Ohio regularly brokered presidential elections with deeply questionable tactics. The current Republican administrations are using similar tactics to those they suffered for years as the minority party. Payback's a bitch.

I voted for Nader last time, in case anyone is wondering, because he actually does want an accurate as opposed to winning vote count.

Q-Clone thing.'

If this is truly viable, where might I find a FAQ on setup fo the XP environment?

Thanks for any help. I had a computer meltdown with my Paris machine that ran flawlessly for 3+ years on WinMe. I started out building another Me machine, but eventually realized that I should take this as an opportunity to move forward and switched to XP and never looked back. Two thumbs-up from me.

There is a link at the bottom of the "PC Specific Stuff" section.

David.

Gotta love those BSD licenses, I just hop the FSF keeps on their ass about GPL'd code.

Compare this to IBM's Eclipse project (www.eclipse.org) which went from 'nobody would touch it' to 'moving along really, really nicely' once the code ownership/copyright was put outside of IBM (in a non-profit foundation) and released under a truly free license.

It's alright. The morning cuppa usually happens some 10km East of the server. Unlikely to hit it at that distance.

The biggest risk to the server is when I make a curry. Don't ask. ;o)

Cheers,
Kim.Just make sure there is no open flame around and you'll be fine! ;-)

David.

> Kim.Do you think that an entity with so little native intelligence that they cannot function on a level sufficient to allow them to cast a ballot for/against something should be allowed a voice in determining the future government of this country? Sorry, but people who have been legally adjudicated non-compos-mentis are not allowed to vote. Unfortunately, there are many around who are non-compos-mentis, but have not been legally so adjudicated. However, by their obvious inability to function on a competent level, they self-adjudicate, so to speak.
My comments have nothing to do with race. I do have reservations about Darwin Award candidates having a hand in determining my future. If that makes me a Eugenecist in your eyes, then so be it.
All I'm saying is that if you can't get it together to get something so simple right the first time, then you don't have the wherewithall to be a part of the decision making process.

> Good point, cron.

What history shows is that if people can cheat, they will. Doesn't
matter the political party. There are plenty of examples to establish
the problem.

But what's happening now is the creation of pervasive computer-based
systems that offer the following irresistible temptation: Cheating that
is potentially easy, quick, undetectable and coast to coast.

For every election.

Dead men voting is child's play compared to this.

I don't care what your political leanings are, if you believe in
representative government this is a DISASTER.

Here's another web site:
<http://www.votetrustusa.org/>

Cheers,
-Jamie

>Well, my ears are finally up to speed again so I'm back at work. I'm mixing
tonight, tomorrow and Saturday nights, then I'm out of town until the 1st.
the project is due out of here by the 8th. I think I can pull it off,
especially since the producer will be back tomorrow.

One thing is becoming really clear about this hybrid mixing, ie-Cubase
streaming into Paris.....it's amazingly flexible. For instance, I can apply
processing on bass tracks in SX and then further influence the way the
processor works by either really slamming it with the SX channel and then
attenuating it a bit with the Paris fader, or I can be much less aggressive
with the processor as relates to how hard I'm hitting it in SX and then
boost the level in Paris, and add or attenuate this further by using the EQ
makeup gain as well. It's almost like having too many gain
staging/processing options. Sheesh!

Also, I'm really starting to appreciate NoLimit on lead vox. You can wash a
vocal track in reverb and then use NoLimit to make it prominent in the mix
again without it sounding washed out. It's nothing new, but it's soooo
darned simple. Every time I do this I thank the Skunkworks guys for all the
hard work.

Back to work now.....So if I'm doing Pro Tools on a Mac at one studio and wanting to
use those files on my XP Paris rig whats the best way to move the
files.

I was hoping to use an external Firewire drive and go back and
forth which I assume would need a Mac OS read/write translator on
the PC.What is the best app for this.

Or is burning wav files to a cd/dvd the best way to go about

this?

Thanks,
PeteThanks for trying and also for letting us know how it went, Rohde. I'm glad it's working for you!

All the best,

Mike

With just /intaffinity set, the system goes considerably longer if the affinity for the Paris process is set to the last processor. However, I would eventually get a locked transport.

Seems /onecpu is the way to go (/intaffinity tossed in for good measure).

Chris Ludwig got two ADATs in one Mec with XP to fly for a friend of =
mine but it=20
wasn't easy as I recall. Brian did too. I think it has to do with
the order that you install the cards from the initial install among
other things. DJ almost did I think.

I am a jazz trumpet player and I bought and have one and I absolutely LOVE it! I have played live in many, situations, through all kinds of systems, and have NEVER sounded so natural and good as with this system. It also can integrate into a standard system, because I did a concert of my music with it mixed in with a traditional system of EV speakers and it worked great.

I have also used it for some of my friends for vocal stuff, and they all just were very surprised and pleased with the results. If you are in a heavy rock band, it may not be for you, but if you are looking for the most natural sound you can get, try one. I agree that Bose hi fi systems are not desirable, but this is entirely different. These people did their homework. Now I am sure there are people who have had problems with them, and NOTHING is right for EVERYONE, but I love mine. It was one of the best investments I ever made in regards to audio, including my precious Paris! When I first played through it in the store, with my trumpet, I heard my trumpet louder, but I had to ask if it was even on. It reproduced my horn so clearly, I just wasn't sure. I have used it in large halls, and was amazed at how the sound filled every section of the hall evenly and with the same volume.

I would go to a local Guitar Center store if one is near you, to try them in person. They also have a good return policy if they don't work for you.

Lou Guarino

www.enchantedvibrations.comLightening, thunder, and rain, oh the rain...

After several glitches in the power, now, for some reason, the safety switch has tripped, which of course cut power to the server. It seems that the safety switch is only on some circuits though. I've run a lead to another socket and the server UPS is getting fed mains again. Wouldn't surprise me if I lose power altogether soon though.

Now to work out why the safety switch wont reset. I'm wondering if water has gotten into the wiring somewhere... something's not right. Between the wiring in this house, and the electricity in this street, I'll be lucky if this house doesn't burn down one of these days...

Cheers,

Kim. Well, I found what tripped the safety switch. A small leak has emerged right near, would you believe, the NG server, and a few drops have water have landed in the NG server monitor, causing a short which has then tripped the safety switch.

The server itself looks dry though. I think we're safe. I have a million 15 inch monitors if that one doesn't work when it dries out...

Cheers,

Kim.

This is after over a week of Midi Hell. I am fairly well
versed with midi as a whole. This has been far less pleasant
than my first day with multi-timberal synths, controllers, editors,
computers, midi merging, SMPTE to Midi Song Pointer and=20
no information to start with.

Problem #1:

After not being able to transmit sysex from my Amiga
to my TX7s without it 'taking out' the Motu 8x8 patch bay
and crashing Windows into an auto restart from black screen
I loaded FM Alive. This allows the PC (instead of Amiga)
to send this sysex data. Well the problems didn't go away,they
just changed. FM Alive was getting long sysex messages that made=20
no sense. It would work at editing the synths but irrelevant data=20
was constantly being seen to the program. I disconnected all midi=20
connections from the Motu 8x8 and STILL USB-MIDI data was being seen. =20
Cubase wasn't open. I have not been beaten.

I decided to try my original concept of using this Motu 8x8
as a stand alone and program a few presets, disconnect
the USB, reinstall my Fastlane 2x2 and hook it up the=20
old fashioned way. Midi in/out of Cubase through

Fastlane to one input/output of Motu 8x8 then routed to all ins/outs of hardware synths. Piece of cake so I thought.=20

Now to dig up the drivers for the FastLane again... I loaded what=20 I thought were the right ones but they weren't. They were for the com = port.

Okay, so I download the newest ones from Motu's site. I bring them into the computer to realize minus Clockworks they are the exact same drivers that were already in there for the 8x8. Well the 8x8 wasn't working flawlessly so I thought I'd 'remove' then 'reinstall' them just to be safe. After the reinstall, the directions are to plug in the device (USB cable) and Windows should=20 recognize the new hardware. The only thing that was recognized was the=20 smell of burning components. I quickly shut down two computers to find out that the green FastLane smoked!
This is the final straw. =20

Drivers from Motu are flakey as hell.
I swear they sent a higher than normal voltage down the USB=20 line somehow. =20

I now need a new small in/out box (2x2) and a stand alone 8x8=20 that works and merges without Fn drivers.
What is there?

The "sick of it all" guy,
Tom

PS Midi is still cool. Motu is not.

it has the most
user upgradeable parts. You can replace the noisy fans and power supply
with better quality ones very easily. YOU can find them cheap on E bay.

(859) 635-5762Hi Tom,
Sadly a common MOTU experience. The M-Audio stuff has always worked for
me as well as the Edirol stuff.
Does your sound card have midi ports on it? I couldn't find a mention
which it is you have.
Hopefully the MOTU didn't damage your on board USB ports!!

Mic,
Are you doing this Mic? I've wanted this since the
Sony DMX R100 came out. What does it cost
for a touch sensitive screen? Do you need a pen
or can you do it with your fingers? Do your 17"s
mimic the 19"s?

Take a pic I have to see!!!
Tom

-----=_NextPart_000_0135_01C6394A.3A772DD0--Hi Tom,

Yup have it all working - touch sensitive mirror the verticals -
 have the verticals so I can sit back and see what is going on.
 Can use finger or pen. I constructed my own screens I like
 Dell LCDs (don't like Dell :-) , so lurked on ebay for a good
 deal and then bought Magic Touch embedded (not overlays). The
 embedded fits right against the LCD screen after the bezel is
 removed - this is much better than the overlays which go over
 the bezel and leave a gap - this decreases accuracy. Multi -
 touch would make this the perfect environment as it is so
 intuitive using your fingers (did I say that? :-)).

Gonna follow up on DJ's link.

Mic.

he PC (instead of Amiga)</DIV>

<DIV>to send this =

sysex=20

data. Well the problems didn't go away,they

<DIV>just =
changed. FM=20

Alive was getting long=20

sysx messages that made

<DIV>no = sense. It would=20

work at =
editing the=20

synths but irrelevant data

<DIV>was =
constantly being=20

seen to the program. <FONT face=3D"Comic Sans MS" =
color=3D#800000=20

I disconnected all midi

<DIV>connections =
from the Motu=20

8x8 and **STILL USB-MIDI=20**

data was being seen.

<DIV>Cubase wasn't =

[illegible]

I have not been beaten.</DIV>

<DIV><FONT face=3D"Comic Sans MS" color=3D#800000 =
size=3D2> </DIV>

```
<DIV><FONT face=3D"Comic Sans MS" color=3D#800000 size=3D2>I decided to =  
try my=20
```

original concept of using this Motu 8x8

<DIV>as a stand =
alone and=20

program a few presets, disconnect</DIV>

<DIV>the USB, =
reinstall my=20

Fastlane 2x2 and hook it up the

<DIV>old fashioned =
way. =20

Midi in/out of Cubase through

<DIV>Fastlane to =
one=20

input/output of Motu 8x8 then routed</DIV>

<DIV>to all =
ins/outs of hardware=20

synths. Piece of cake so I thought.

<DIV><FONT face="Comic Sans MS" color=#800000 =
size=2> </DIV>
<DIV> Now to =
dig=20
up the =
drivers for the=20
FastLane again... I loaded what </DIV>
<DIV>I =
<FONT =20
face="Comic Sans MS" color=#800000 size=2>thought were the right =
ones but they=20
weren't. They were for the com port.</DIV>
<DIV>Okay, so I =
<FONT =20
face="Comic Sans MS" color=#800000 size=2>download the newest ones =
from Motu's=20
site. I bring</DIV>
<DIV>them into the =
computer to=20
realize minus Clockworks they are</DIV>
<DIV>the exact =
same drivers that=20
were already in there for the 8x8. Well</DIV>
<DIV>the 8x8 =
wasn't working=20
flawlessly so I thought I'd 'remove'</DIV>
<DIV>then =
'reinstall' them just=20
to be safe. After the reinstall, the</DIV>
<DIV>directions =
are to plug in=20
the device (USB cable) and Windows should </DIV>
<DIV>recognize the =
new=20
hardware. The only thing that was recognized was the </DIV>
<DIV><FONT =
color=#800000><FONT =20
size=3>smell of burning components. I quickly shut down =
two=20
computers to</DIV>
<DIV><FONT =
color=#800000>find out that=20
the green FastLane =
smoked!</DIV>
<DIV>This is the =
final=20
straw. </DIV>
<DIV><FONT face="Comic Sans MS" color=#800000 =

```

size=3D2></FONT>&nbsp;</DIV>
<DIV><FONT face=3D"Comic Sans MS" color=3D#800000 size=3D2>Drivers from =
Motu are=20
flakey as hell.</FONT></DIV>
<DIV><FONT face=3D"Comic Sans MS" color=3D#800000 size=3D2>I swear they =
sent a higher=20
than normal voltage down the USB </FONT></DIV>
<DIV><FONT face=3D"Comic Sans MS" color=3D#800000 size=3D2>line =
somehow.&nbsp;</FONT></DIV>
<DIV><FONT face=3D"Comic Sans MS" color=3D#800000 =
size=3D2></FONT>&nbsp;</DIV>
<DIV><FONT face=3D"Comic Sans MS" color=3D#800000 size=3D2>I now need a =
new small=20
in/out box (2x2) and a stand alone 8x8 </FONT></DIV>
<DIV><FONT face=3D"Comic Sans MS" color=3D#800000 size=3D2>that works =
</FONT><FONT=20
face=3D"Comic Sans MS" color=3D#800000 size=3D2>and merges without Fn=20
drivers.</FONT></DIV>
<DIV><FONT face=3D"Comic Sans MS" color=3D#800000 size=3D2>What is =
there?</FONT></DIV>
<DIV><FONT face=3D"Comic Sans MS" color=3D#800000></FONT>&nbsp;</DIV>
<DIV><FONT face=3D"Comic Sans MS" color=3D#800000 size=3D2>The "sick of =
it all"=20
guy,</FONT></DIV>
<DIV><FONT face=3D"Comic Sans MS" color=3D#800000 =
size=3D2>Tom</FONT></DIV>
<DIV><FONT face=3D"Comic Sans MS" color=3D#800000></FONT>&nbsp;</DIV>
<DIV><FONT face=3D"Comic Sans MS" color=3D#800000>PS Midi is still =
cool.&nbsp;</FONT></DIV>
is not.</FONT></DIV>

 Stevel beleive they are skipping Paris 4 altogether and going straight to Paris 5
 to make up for lost time.

>Steve

Steve-

i'm tempted to say, yeah, it's out, but there's no info on it, 'cause it won't record any info... but enough jokin.

those other guys are a' pullin' yer leg. Ain't no Paris 4 now, ain't gonna be no Paris 4 later.

Them other guys may have been jokin' with you 'cause they thought you was me.

Give guys named Steve a break, guys....!

-steve the artguyl had to switch to m-audio when i couldn't get my M24 controller to work.

>IT ACTUALLY WORKS!!!!Hi all

I have a couple of projects coming up that are going to be using huge track counts in the beginning stages and although virtual tracks are nice they really are a PITA.

So the question is - for a four EDS Card set up is their a MB / CPU combination out there that works with paris that would allow the addition of a UAD1 card (making five slots total) or should I start looking at a magma chassis for this setup?

DonOh and while I'm asking...best vide

DJ, I recall that you are using Mytek converters. Is this through the ADAT
I/O? Is the hit from 24 bit to 20 worth the better quality of the converters?

Thanks

Chris,
No midi on the Delta 66 but that's soon to be gone as
is the whole computer during the summer. I plan
to get an RME with ADAT and midi interfaces. I will
still need the 8x8 though.

It's between emagic unitor 8, MidiSport 8x8 or
Edirol UM 880.

Anyone like these?
Tom

"Chris Ludwig" <chrisl@adkproaudio.com> wrote in message =
news:44008766@linux...

Hi Tom,
Sadly a common MOTU experience. The M-Audio stuff has always worked =
for=20
me as well as the Edirol stuff.

Does your sound card have midi ports on it? I couldn't find a mention=20
which it is you have.
Hopefully the MOTU didn't damage your on board USB ports!!

Chris

-----=_NextPart_000_0164_01C63A32.9CD10E40--After I had finished renovations back in 2000
it was time to turn the heating
system back on.

I went down to the basement, fired it up and heard the sound of running,
dripping cascading water coming from upstairs. Ran upstairs to find that
I had never capped the input side of a radiator I (permanently) removed from
the 1st floor bathroom.

Ran back to the basement to find water showering all over the old ibm netfinity
that ran the newsgroup. Darn thing never missed a beat.

This was just a few drops. Just happened they made their way in through
the vent in the top of the monitor.

Actually running water... now that sounds troubling. ;o)

Cheers,
Kim.

Got my head out my arse and paired it back down to one MEC.

Everything is perfect, and I just reassign cards and submixes when I want
to mix things up.

Thanks to you for your help.

JimmyChris,

FYI (and I know this is sort of OT) but I've had really good results using a
PCI latency adjustment tool to get things happening with 4 x UAD cards and 3
x RME cards in a 13 slot Magma. I'm getting around 60-65% (up from around
35-40%) UAD-1 resource usage before I start getting crackling. That's a
lot of UAD-1 plugins.

>no it's a g5. if i were even to buy an intel mac it wouldn't be until they were out for a couple of years for studio use...i'd be afraid that i'd be buying something like i had in the fs800...disaster.

the test was with logic as all the files for dp have waves, drumagog and other plugs that need to be authorized. my partner has the iloks for those in arizona at the moment and will be gone till the 3/27.

as far as sids with logic goes i usually convert or record through outboard gear the synths and use them as audio tracks once i get the part right.

my next project...i don't know. for the last year plus i've been letting the studio pay me to stay out of it other than as a janitor and tech head. for me right now i think i'd like to specialize in acoustic stuff and leave the everybody is playing the same mostly bad to scott.

for the last few months i've gotten back into song writing and working on my playing chops...okay, slops is probably more like it but i really missed do that. i'm trying to replace the voices in my head with melodies.

I thought you were talking about running Paris on your new Mac.
Of course Logic 7x works with the G5(s).Duhh :)

Prices are silly steep but it's fun to walk around and check
out the stuff.

David.

I'm SP1 both Paris and Cubase.

"Neil" <OIUOIU@OIU.com> wrote in message news:44028f33\$1@linux...

How many of you guys that are having issues with interfaces have installed XP Service Pack 2?

The reason I ask is that I upgraded to a new mobo & CPU recently, and my RME Multiface was working OK until I loaded Service Pack 2, and now the drivers aren't being recognized at all, and I'm having difficulty getting it to roll back properly to the system restore point before SP#2.

Anyone else experiencing driver issues with SP2, or could it be something else completely?

Neil

[illegible][illegible]

STILL USB-MIDI data was being

[illegible]

my original concept of using this Motu 8x8
as a stand alone and program =
a few

the USB, reinstall my Fastlane 2x2 and hook it up the
old fashioned way.

Fastlane to one input/output of Motu 8x8 then routed
to all ins/outs of hardware synths.
Piece of cake so I thought.

the FastLane again... I loaded what
I thought were the right =
ones but=

[illegible]

Okay, so=20

I download the newest ones from Motu's site. I =
bring
> =20

```
>        >, them into the computer to =  
realize=20
```

minus Clockworks they are
> = nbspnbspnbspnbspn= 20

> the exact same drivers that were already in there for the =
8x8. =20

Well, the 8x8 = 20

[illegible]

safe. After the reinstall, the
> directions are to plug in =
the device=

(USB cable) and Windows should
recognize the new hardware.

The only thing that was recognized
 was the
 > smell of burning = components.

quickly shut down two computers to
> find out that the green = FastLane=20

smoked!
> & > & > & > & > & > & This =
is the=20

[illegible]

```
flakey as hell.<BR>&gt;&nbsp;& & & & & & & & =  
&gt;l=20
```

swear they sent a higher than normal voltage down the =
USB
> =20

[illegible]

(2x2) and a stand alone 8x8
= 20

> that works and merges without Fn drivers.
>

out of thick dense foam wall board, but I'm thinking some quieter chassis fans would help too. I googled "super quiet fans," but very little popped up. Anybody out there found a useful solution?

Thanks.

MR I'm not sure how they do it, but the Dell in my office is really quiet - one of the quietest machines I have heard. You could check their fans out somehow.

I spent a whole lot of \$ buying "quiet" fans that were never quiet enough.
I wouldn't even go there.

Good luck!

Mike

```

have installed XP Service Pack 2?

The reason I ask is that I upgraded to a new mobo & CPU recently, and my RME Multiface was working OK until I loaded Service Pack 2, and now the drivers aren't being recognized at all, and I'm having difficulty getting it to roll back properly to the system restore point before SP#2.

Anyone else experiencing driver issues with SP2, or could it be something else completely?

Neil

Rick,

As Mr. Davis (not Sammy) would say:

"You're freakin' me out..."

Two comps both connected via USB? Hubs are great huh?

I'm spooked but it's good that you got that happening.

I think the Motu Clockworks software is the problem at this end. Now that it's programmed I won't let it see the software. I know many are happy with Motu products. I am so disgusted with drivers, incompatibility and bugs that I am less patient than I used to be. Most hardware that is software driven (internally) is usually very stable if not=20 missing a few features. I'd prefer stability anytime.
T.

no, i'm using the 4x4 for the m24 controller (3 I/O's) and one for the
keystation. actually it's connected to both the mac and a pc via usb
to allow sharing of hardware.

Rod,
All is good here using SMPTE from Paris to Motu Midi Express XT
for Cubase MTC. Almost instant lock up. Amiga was about as good...
I'm gonna miss the old girl.

The TX7 freeware editor isn't so hot and likes to rock the Motu's boat.
I might be investing in FM7 for stability's sake. \$279 ouch.

Thanks for all the help. Cubase is working while minimized too. =20
Thanks Neil.

90% of the time for MIDI =
only
do I need to worry about sample accuracy? I don't see drum tracks needing to "line up"
= on
another
pass. I am using Paris XP and can use SMPTE or
=
= MTC.
; =
MTC means another IRQ for the MIDI card(I have a Magma) =
but
= I'm
already using 5
EDS and a UAD. Is there a benefit in
= terms of
lock time
using MTC over SMPTE? & & Cubase seems
= like it
w
