tracked with a '57 - a mic which starts rolling off like crazy even before it gets to the 16k you're talking about - I think I'm leaning towards this possibility.

c.) Do you normally mic the bottom head too? I really hate this, myself, but sometimes you can get a bit more "air" out of it with the snares sizzling around right in the face of the bottom mic. Problem then becomes finding a balance between that effect and the inevitable "pfft" that results from this top/bottom micing combination... throw Fleetwood Mac's "Rhiannon" on your 8-Track for what I find to be an extreme "pfftexample" of that sound. URRGH!

d.) Is is possibly more of a compression thing than an EQ thing that you're he
