Sorry Steve I'm looking for an 8 in card and I thought it might get noticed
here quicker than in the for sale group. Jim

>Hi Mike,

Your effort here is beyond what anyone expects.

I have a question for you on this new Scherzo driver.
Will 1.31 work efficiently with a single core system? Is
there any benefit for those older boxes? Just curious.

Next week I will give it all a go. I can't wait to dive into a crazy fast computer and make it work flawlessly.

>Hi All,

I think the driver is ready for prime time. Thank you so much to everyone who tested the driver and reported back their results. I have to admit that I haven't kept a list of who that is. If you beta tested either the PSCL or the Scherzo, please send me an email (mike at mikeaudet dot com), and I'll send you a release build of the driver. The release build has a couple of additional bugs fixed, and it's compiled in a way that is faster and uses less RAM (because there is no debugging code). I don't want anyone who helped make this happen to have to pay for the driver.

Some may think I should just give the driver away. But, I'm a new teacher living paycheck to paycheck, and I don't think it's fair that I should be working for free. I've revamped ensoniq.ca, and I'll be adding more audio samples over the holidays. It should allow downloads without waiting for me to send an email. I'll be starting a google adwords campaign to get the word out to PARIS users who don't come here. With a little luck, I'll get a Grace m101 out of the thing.

My next steps are helping Kerry out with his mirror site and getting the ASIO driver updated - I'm aiming for low latency and 24 bit.

Thanks again to everyone.

Cheers! We did it!

MikeHey Mike

I plan to upgrade both my machines to multicore rigs in the new year and you can count on my financial support.
