tp://www.thinksecret.com/news/finalcut6.htmlThanks for the info. Yes, I know about the tape. I have been using Athlons and Durons for some time now. The ECS board I got, K7VTA3, from FRYs with the Barton 2500+ was really buggy and I was sorta glad to see it expedited to another dimension. I think the AGP died, but haven't tried it with a PCI VC. (It was only \$69 with the cpu, so didn't feel too cheated.) A friend

who went to work there told me Frys had over an 80% return rate with ECS (just used as a c'mon to get people in the door), so I don't feel to positive about them. And with PARIS I don't need any extra bugs! :)
Not familiar with or seen any reviews of asrock.

4. ARM CHANNELS: Press and hold the Select button on the desired channel(s) for about one second. The RED Led will light above the channel strip, indicating that Automation Edit is enabled for that track.

5. BEGIN WRITING AUTOMATION DATA: During playback, tap the Select button on the ARMED channel(s) to write fader automation. The yellow LED will light indicating Automation "Write Mode". Move faders, press Mute or adjust EQ to record the moves.

6. Press the Stop button when no further volume or Mute-button changes are to needed and disable the Auto button.

7. To un-arm each Channel to stop the recording of automation data, press and hold the channel's Select button for one second. The RED led

will go out.

8. To activate playback of each Channel's automation data, open the Mixer window and turn on the "A" enable automation playback button at the bottom of each fader.

To do this for Mutes and Pans, skip step 5.

PUNCH IN/OUT: You can punch in and out of Automation Write Mode by tapping the Select button during playback. If you can "ride" the faders into automation or automate mutes you don't have to use gates as much and you save cpu. > positive about them. And with PARIS I don't need any extra bugs! :)

Ah, Paris... I went with Aaron Allen's long standing recommendation; an Asus A7S333. But I haven't tried it with the barton, yet.

>Sounds good Jim... I had a little time to go though most of them. Although
I am not a pro in the feedback arena... just a silly musician... I find it
rather daring to put recordings on a DAW bulletin board. People tend to
speak mainly with their fingers... lol. I liked most of the songs and their
style. The sonics sound good too.

Personally I don't care for most music that is released these days by the
big studios. You can almost feel the bubblegum in each song. My wife likes
country... and she knows country artists... but when I listen to newer
stuff.. it's like... that ain't country... that's a rock band with a country
singer...(glorified karaoke)... things like that. Maybe I am too
critical... but I am beginning to believe musicians are losing our roots...
gosh, I sit and listen (and love to watch DvD's) of bands from the 70's and
80's... some 90's... and think... those people were really great and really
into it. So original! An example is Collective Soul. There's alot of
electronics in thier songs and although I never seen them play, my wife did
and claims they play their songs just like the CD's. To me, that's
original! Anyway, when I first heard a few songs, I thought the band was
younger folks (teens) based on vocals... then I pulled up the website pic...
huh? lol. Sorry to ramble on... but keep up the good work and music! Is
that a TC Helicon on harmony? I got a quintet.. and with my braised voice..
it can be brutal on me. Just wondering. Good job! peace! ~ Ed

The only real complaint I have with PT these days is that the cost adds up just to get things sitting in the analog or paris realm. The McDSP stuff sounds great but it ain't cheap either. I just upgraded to PT7 for HD and so far am very happy with the improvements. I also just upgraded Amp Farm to version 3, and it's a big difference to my ears, so I'm excited about that. And acid/rex support in PT now to a certain degree, which will make it quicker to throw down ideas..

Cheers,

TC

Kent,

I'm in the Boston area. I know there's a bay around here somewhere...

There's Tom Boyles and Tom Bancroft too.

The other Tom

"RK" <kent510745@hotmail.com> wrote in message news:43bc836c@linux...

Cool, I'll give that a try.

Tom, didn't you used to be down in the Bay Area? I'm just getting =
back into Paris, but I thought you were trying to get a Bay Area user =
group going a couple years back. =20

Kent

"Tom Bruhl" <arpeggio@comcast.net> wrote in message =
news:43bc8234@linux...

RK,

I've never used an out of phase signal for this purpose. I have
used something similar though. Copy lead vocal track to an
adjacent channel, pan each hard lft-rt, move the left track a =
millisecond or

even less back in time. The vocal should widen without sounding
processed. Keep their faders equal level. Your ear will naturally =
hear the

earlier track (lft) first and perceive that it's louder. If you =
feel that's disconcerting=20

try raising the right to level it out. This may decrease the =
effectiveness of the=20
process though.

Another way to get it to sound more present is to double
compress the track with comps in series but only reducing by 2 or =

3db each.

Sometimes a third comp is needed along with level automation. The idea

is to not hear pumping but have a fairly steady state level to the vocal.

This will allow you to get it to ride on top of the mix without jumping out to bite you.

"RK" <kent510745@hotmail.com> wrote in message = news:43bc7a43@linux...

Trying to get lead vocals to jump out of the mix and I remember a trick

listed somewhere telling you to copy a vocal track to a different track, pan

Ahhh, Tom Boyles, that's it. Lot of Tommy B's in this hood.

"Tom Bruhl" <arpeggio@comcast.net> wrote in message =

Kent,

I'm in the Boston area. I know there's a bay around here somewhere...

There's Tom Boyles and Tom Bancroft too.

The other Tom

 news:43bc836c@linux...

Cool, I'll give that a try.

Tom, didn't you used to be down in the Bay Area? I'm just getting =
back into Paris, but I thought you were trying to get a Bay Area user =
group going a couple years back. =20

Kent

"Tom Bruhl" <arpeggio@comcast.net> wrote in message =
news:43bc8234@linux...

RK,

I've never used an out of phase signal for this purpose. I have
used something similar though. Copy lead vocal track to an
adjacent channel, pan each hard lft-rt, move the left track a =
millisecond or
even less back in time. The vocal should widen without sounding
processed. Keep their faders equal level. Your ear will =
naturally hear the
earlier track (lft) first and perceive that it's louder. If you =
feel that's disconcerting=20
try raising the right to level it out. This may decrease the =
effectiveness of the=20
process though.

Another way to get it to sound more present is to double
compress the track with comps in series but only reducing by 2 or =
3db each.

Sometimes a third comp is needed along with level automation. The =
idea

is to not hear pumping but have a fairly steady state level to the =
vocal.

This will allow you to get it to ride on top of the mix without =
jumping out
to bite you.

"RK" <kent510745@hotmail.com> wrote in message =

Trying to get lead vocals to jump out of the mix and I remember =
a trick

listed somewhere telling you to copy a vocal track to a =
different track, pan

tracks left and right, then reverse the phase on the second =
track and slowly

bring the fader on the second track to meet the other track =
fader at 0.

Seemed to work, but the effects seemed to cancel each other out. =
Does

anyone use this, and if so, how do you get the FX to not whack =
each other
out?

RK,
Only apply effects to the +phase track.
Tom
