As Erling pointed out... I am a pervasive ghoster. I would, if I were you,
GHOST the current SP3 OS before doing the SP3 removal/uninstall.

That's what I thought but I wasn't sure if there was something
more specific. He gets that when booting up sometimes.
I think he's got some connection issues.

Thanks,

I've got a mobo from the approved list,so it should be pretty smooth sailing(i hope) I've already purchased the mobo cpu and ram so I'm committed. This will be my first build. Wish me luck! So far this is what I've got:

ASUS P5K Deluxe/Wifi

Q6600 2.4Ghz 8mb cache 64 bit 1006 FSB

8GB DDR-2 667

xfx Geforce 8600GT video card

I got all this for \$432

respect

There were a *lot* of little gremlins running around in there. It took Mike a long time to get them all singing the same song in the same key; fortunately this seems to have been achieved :D

I have a client that wants to run a Digi 003 on a new MacBook Pro, only FW800 on the machine though. I take it he will have to run a FW express card... any recommendations?

Thanks,

As a sidebar - I believe that in the absence of accurate information,
makers of conversion software have made incorrect assumptions about the
PARIS community and by implication the PAF format.

I reckon there's a general assumption that nobody uses PAF any more -
the visible indicator of this assumption is that there are quite a
number of conversion utilities that *read* PAF but a much smaller
number that *write* PAF. Because the work involved to add *write*
functionality seems trivial in comparison to the original task of
including PAF compatibility in the first place, my guess is that the
general assumptions are that PAF is a dead format, the only conceivable
use for PAF compatibility is "retrieving files from old archives", and
that nobody would actually wish to *create* PAFs any more. So my guess
is that *write* functionality wasn't turned on simply because even this
trivial amount of work was thought to be pointless.

I want to address that incorrect assumption head-on. I reckon there's
a comparatively trivial amount of work necessary to make conversion
utilities that *read* PAF *write* PAF as well, so once the forums are
up and running I'm going to be hitting up every maker of conversion
software that I can think of that *reads* PAF format, showing them the
forums and Wiki and blog (giving a more accurate indicator of
existence/size/heft of current community) and say "please turn this
functionality on".

- KerryHey Mike, was wondering if you could write some drivers or code that would
make Paris run on this. We could have a processor for each Paris window.
;-)

Rod

<http://investors.cray.com/phoenix.zhtml?c=98390&p=irol-newsArticle&ID=1197689>Hi David,
You "should" just need one of these to use the PT system with it.
http://www.cablestogo.com/product.asp?cat_id=611&sku=50705

He might want to do some home work to see if PT 7.4 or even 8 have been tested with these unit models.

It would not shock me at all if Apple and Digi have not tested this yet.

ADK Pro Audio
(859) 635-5762
www.adkproaudio.com
chrisl@adkproaudio.comMakes it a great value Mac, doesn't it?

The only gotcha may be the 8gb ram...don't know if its been tried..at least
I'm not aware of it...

Also , I assume your dvd and HD are sata...and don't forget to make sre HCPI
is set in the bios, but just read the duide and you should be ok.

Best of luck.

Martin H

 had my Paris Rig all good and running ok.. got a SBS (Magma
 like thing) installed my 4 EDS-1000 cards.. my system is all translated
 into a big physical Patchbay .. so the Paris's (MEC) modules.. are actually
 on the Patchbay .. now I try recording.. the indicator and everything runs
 perfectly.. but.. NO RECORDING WHAT SO EVER... any idea why ? I am going
 mental.. MORE mental"LaMont" <jjdpro@gmail.com> wrote:

LaMont,

I'm not having any issues at all running the 4 x UAD-1's in my Magma and a UAD-2 Quad in a mobo PCIe slot. I'm running a PNY quadro video card which uses two IRQ's and the UAD2 is sharing one of those IRQ's and it is still running very smoothly. this is the first time I've ever experienced joy when sharing an interrupt with any device and a graphics driver. I don't know if it's just a well written set of drivers for both devices or having plenty of bandwidth on the PCIe bus or a combination of both. Whatever's happening, it's working for me nicely. Hiya fellas! And gals!

Hey, the house I lived in for 12 years with the PARIS studio in it has been sold, and I had to move out. Waaaa! BUT . . . the owner let me take all the recording gear with me cuz he doesn't know how to use it anyway and thinks it's too old. Yay! BUT . . . I don't really have a studio anymore, at least not with the nice separate control room with the little window, etc. I just have a big old finished basement with a strange little room attached. The space is mostly carpeted, except for about the last 8 of the 32 foot length, which is linoleum. Low ceiling w/ ceiling tiles (8'? maybe even 7')

I attached a crude diagram of the space that I drew in Photoshop in hopes of getting some opinions on how best to set up the studio and what to do with that little room. (Yeah, I know, I used the " inches symbol instead of the ' foot symbol, but no, it's not a doll house. Just translate to feet please.) Vocal/drum booth? Machine room? Hookah lounge? Do I need to barter with some carpenter/songwriter to build me a wall for a separate control room? Also, what about cheap sound-proofing? I have a bunch of Auralex bass traps and a few panels, but not enough for the whole space.

Anyway, I need to get set up soon as I can, cuz we had to dismantle the studio right in the middle of the rhythm tracks for the new Sarahtonin CD, which is promising to be even better than the first, if that's possible. :)

Thanks in advance for your cogitations.

Humbly yours,

Sarahtonin

PS: Happy Halloween!

Heya Yasser... hmmmmm. You have the meters on the channel strips moving
- but no audio is getting laid down on the edit screen or showing up in
the Audio Bin, is that what it is?

K - I Googled the SBS chassis but don't have specifics. What kind of
power supply is it? Enough to feed four EDS?

- KerryCouple of questions

1) what instruments will you be tracking?

1a) Do you record many at one time?

2) what kind of budget do you have?

3) are you allowed to move that existing wall?

4) how noisy is that furnace?

Drums w/ bass guitar going direct, sometimes w/ keys, also direct.
Everything else (guitars, vocals, flute, violin, bassoon, etc) recorded
individually.

>
> 2) what kind of budget do you have?

Budget? Uh . . . does that mean money? I work as an RN . . .
sometimes I have a couple hundred left out of a paycheck.
>
> 3) are you allowed to move that existing wall?

I haven't talked to the new landlords abt any major modifications,
but as long as they're not paying for it, they might not object.
>
> 4) how noisy is that furnace?

It's an oil furnace, kind of a dull roar when the fan is going,

otherwise not quiet. Actually louder upstairs than down. Haven't measured decibels. :)

>Just soundproof the computer by putting it in a closet with a fan and stick
with one big open room. That what I do and love it.Hi Sarah
What you could do is use that small room as a machine room and access hall

to the ctrl room. That center partition must be a supporting partition of 2' x 6" for the floor above so you cant really mess with it to much but you should be able to add a couple openings with headers for the 2 doors. Then that furnace area needs attention for sure, dbl wall with insulation, RC channel and 5/8" drywall rite from floor to floor above, sealed tight. I attached a jpg of my ideas.
That is probably what I would do in your position Sarah.
Good luck and keep us posted.

Rob

Using Rob's JPG as a template I'd put my mixing area along the far short wall of the small room...better acoustic properties and you could use the walk around room as a bass trap.

As for sound treatment Owens Corning 703 wrapped in fabric and hung on the walls and placed in the corners of both rooms...this will probably be your single biggest expense but best bang for your buck in terms of treatment.

This would be my first thought. Low ceilings can be dealt with using diffusors.
"Unparalleling" the walls can be dealt with by using free standing gobos
made of the proper materials. I'd try to build a wall, door and window from

the Live room to separate the CR from the vocal booth and live tracking area. Isolation is your friend. You should "shoot the room" first and get it analyzed. Ethan Winer could assist you and his site has DIY info for his acoustics designs

<http://www.realtraps.com/info.htm>

Do you have some other friends who are carpenters who may be willing to swap studio time for some build out effort/materials. Before I moved to this place, I had a somewhat similar situation and layout with long walls/rectangular rooms and low ceilings. It took a while to get it sussed, but I finally achieved a workable situation.

Good luck,

;)

---= linux490b0670--Don, did you find any OC703 out your way, I'm having a hell of a time

finding some out East. I am planning on going with that Rockwool stuff from Roxul, according to Ethan, it is very similar.

Deej, do you have any plans for these Gobo freestanding basstraps, been trying to find some proper plans with no luck.

Thanks

you'll probably have to get it at a building supply store as the big box stores don't carry it...at least in Ottawa

Damn that's expensive Roxul RXL 40 in Canada is only \$50 for six batts"Rob Arsenault"

I used Roxul RXL 40 wrapped in twin bed sheets and framed in 1X3 cedar (got
a deal) and used plywood to make triangular legged bases to slide my 2X4
panels into to make them free standing...I sent Dimitrios a whack of photos
and I'll see if I can find them...if not I'll take some more pics and post
them"Rob Arsenault" <mani1147athotmaildotcom> wrote in message

Here are my freestanding panels

>Here are my freestanding panels

Very cool. I like your stand design. I'm assuming it's to fit 24" x 48" 703 style wrapped/framed panels, right? I'm getting ready to build myself something to tune my drum room. Those look like they would work nicely."Deej" <noway@jose.net> wrote in message news:490b2b4c\$1@linux...

I had to trim the 703 (RXL 40 in Canada) by about 1/2 inch along the side so that I could maximise the use of my wood lengths. But yes, very little work - I have 8 of these on stands...took 2 - 4X8 sheets of plywood to build the stands.

Can send you the measurements if you'd like

..That's pretty damn cool.

I've got to get a system together for my drummer so he use Logic LE and Pro Tools. Maybe this is the way to go since his budget is limited..

Cheers,

TC

Here are the basic measurements

Basically it took one afternoon to make 1 - 4X6, 4 - 2X8, 13 - 2X4 panels

One afternoon to make the 8 bases from two sheets of plywood

One afternoon to stain it all

One afternoon to cut and wrap the insulation then fit the wrapped batts inside the frames and then a couple more hours to place the free standing panels and install 4 panels (clouds) on my ceiling

Remember here in Canuckistan an afternoon is rather short - maybe four hours

Beer breaks and all eh wot?

hehehe

We use these surplus office dividers... we got a PILE (cube van load) of them for \$10 each at auction. They work great and come in various sizes.

David.

Looks like a good weekend project for me. My partner owns a woodworking shop.
He's up in NYC this weekend, but when he gets back, it's gonna be time to
cut some wood.

Thanks,

I could buy these by the gross in austin for cheap. Around here, they're
almost impossible to find.....and if that's an M49 hanging from that
boom in the background of the pic, I'm gonna be jealous.

;o)

Hmmm.. I better not take a picture from the other angle then... ;-)
It's what's BEHIND the panels that's fun!

All the new panels are finished and we are in the process of
repopulating the modules. Should be available for sessions (at
Audities) by the end of the year!

David.
