>i guess one would have to define "quirks". i've been involved with
macs since the beginning of PT (other studios) and i've never seen a
"quirk free" one. this is not a criticism of them but, neither do i
see them as the second coming...they're just another computer that
when it works it's great and sucks when it doesn't. if the guy from
atari had any balls, there probably wouldn't be a mac but just a
really kickass functioning audio platform.
