can be a serious issue though. Your system =
will not=20

function with bad SCSI =

cables.</DIV></DIV></BLOCKQUOTE></BODY></HTML>

-----=_NextPart_000_0216_01C7C51D.D4B9FA70--I think Tom was asking if there was a "3.0"
version of the EDS card that needed

to be connected to the master. The answer to that would be no.

Is this what you were asking Tom?

DJ's advice is very important though. I would do it, if you haven't already.

I don't want to sound like a "RTFM" kind of guy, but the Paris manual describes
this procedure pretty well.

It's on page 4 and 5 of the 3.0 version.

It kind of sounds to me like you may not be hooking up the correct eds card
to the master mec.
