nization module will read and generate LTC and VITC time code, and supports both NTSC and PAL formats. The following frame rates are supported: 30, 29.97(non-drop), 29.97 (drop), 25, and 24 fps, with the ability to auto detect the frame rate of incoming time code. The EDS-Sti-01 will support 48kHz and 44.1kHz sampling frequencies, as well as the ability to generate .1% pull-down and pull-up for film-to-video transfers. When reading time code, the EDS-Sti-01 is capable of freewheeling upon detection of missing time code, and has the ability to jam sync or regenerate fresh time code when dubbing. The EDS-Sti-01 supports both Black Burst mode (sample accurate) and Chase Mode type synchronization, and can generate an optional SMPTE time code display window in the video output signal ("window bum").

The EDS-Sti-01 offers the user 11 front panel status indicator LEDs, including 30/29.97 (non-drop), 29.97 (drop), 25, and 24 frame rates, Lock, Video Present, LTC, VITC, Pull Down, Pull Up and Master Sync. Rear panel connectors include (2) quarter-inch TRS connectors for analog SMPTE time code input and output (LTC), and (3) BNC connectors for Video Input, House Sync and Video Output. Will ship to U.S. or Canada only, please. Contact

your card- is that the EDS1000, with daughterboard card? and is it truly
brand new/never been used?

also- your blue mec- is there ANY differences at all, between that and the
black mec, besides the color? i know there are some real, and tangeable
differences, between the black and the blue C16 controllers- but between
the mecs???---

much look forward to hearing back from you---
will much appreciate it---
most sincerely yours,
harry epstein

that's 2 C16's together, for one combined price of \$75.00?- not \$75.00 apiece?
the pots need a little fixing on BOTH of them? how's the cosmetics?
how old are these controllers? did you buy them brand new? what kind of
use have they seen?- and have you ever taken either or both of them apart,
to fix/clean the pots, etc.?---
thanks. hope to hear back from you.
most sincerely,
harry e.

I have a few remaining items for sale. All gear was run in a non-smoking studio, and has fewer than 50 hours.

1 - Mec Black	\$150
1 - C-16	\$ 75
2 - if2 input modules	\$ 40 ea.
1 - Eds 1000	\$ 175

Email if interested joeyl@wgm.us. Shipping is seperate, Pay Pal please.

JoeyYes, I have dealt with Dimitris, top notch ebayer/paris user.

any days has it taken? I'm thinking we should start keeping a public

>> recored.

>>

>> Thanks

>> James

>

>Right now I dont' want to part it out. This is a turnkey studio waiting to happen.

Here's the system:

4 x MECs (IF 442 port not working on one of them)

4 x EDS 1000 cards with interconnect cables

7 slot Magma chassis with host cards and ribbon cable

3 x C-16's

8 x ADAT modules (one of them doesn't have a faceplate or backplate but it works fine)

3 x 24 bit input modules

3 x 24 bit output modules

4 x 15' SCSI 68 pin HD cables (brand new-had'em for 3 months)

3 x IF2's

1 AES output module-the only one in existence that I know of.

2 x Paris 3.0 OS CD's and a bunch of earlier CD's

Brian T DVD

I think I have kept all of the front and backplates I ever had so there will be lots of those included.

Whatever operational manuals I have here.

I'll even include the ASUS A8V Deluxe mobo, AMD 2800 CPU, IG RAM and the system drive which is preconfigured to work flawlessly with an external WC on this rig. It's loaded with Win ME, the OS has been optomized and tweaked and can utilize IG of RAM on win 9x. This has been an extremely stable platform since I built it back in 2003 so you can drop it in a case and get going quick. I'll also label the Magma slots that I have the cards in and the
